(Chapter - 2) (Biological Classification)
(Class - XI)

Question 1:

Discuss how classification systems have undergone several changes over a period of time?

Answer 1:

The classification systems have undergone several changes with time. The first attempt of classification was made by Aristotle. He classified plants as herbs, shrubs, and trees. Animals, on the other hand, were classified on the basis of presence or absence of red blood cells. This system of classification failed to classify all the known organisms.

Therefore, Linnaeus gave a two kingdom system of classification. It consists of kingdom Plantae and kingdom Animalia. However, this system did not differentiate between unicellular and multicellular organisms and between eukaryotes and prokaryotes. Therefore, there were large numbers of organisms that could not be classified under the two kingdoms.

To solve these problems, a five kingdom system of classification was proposed by R.H Whittaker in 1969. On the basis of characteristics, such as cell structure, mode of nutrition, presence of cell wall, etc., five kingdoms, Monera, Protista, Fungi, Plantae, and Animalia were formed.

Question 2:

State two economically important uses of:

- (a) Heterotrophic bacteria
- (b) Archaeobacteria

Answer 2:

(a) Heterotrophic bacteria

- a) They act as decomposers and help in the formation of humus.
- b) They help in the production of curd from milk.
- c) Many antibiotics are obtained from some species of bacteria.
- d) Many soil bacteria help in fixation of atmospheric nitrogen.

(b) Archaeobacteria

- a) Methane gas is produced from the dung of ruminants by the methanogens.
- b) Methanogens are also involved in the formation of biogas and sewage treatment.

Question 3:

What is the nature of cell-walls in diatoms?

Answer 3:

The cell walls of diatoms are made of silica. Their cell wall construction is known as frustule. It consists of two thin overlapping shells that fit into each other such as a soap box. When the diatoms die, the silica in their cell walls gets deposited in the form of diatomaceous earth. This diatomaceous earth is very soft and quite inert. It is used in filtration of oils, sugars, and for other industrial purposes.

Question 4:

Find out what do the terms 'algal bloom' and 'red-tides' signify.

Answer 4:

Algal bloom

Algal bloom refers to an increase in the population of algae or blue-green algae in water, resulting in discoloration of the water body. This causes an increase in the biological oxygen demand (BOD), resulting in the death of fishes and other aquatic animals.

Red-tides

Red tides are caused by red dinoflagellates (*Gonyaulax*) that multiply rapidly. Due to their large numbers, the sea appears red in colour. They release large amounts of toxins in water that can cause death of a large number of fishes.

YinYang Bipolar Relativity: A Unifying Theory of Nature, Agents and Causality with Applications in Quantum Computing, Cognitive Informatics and Life Sciences Zhang, Wen-Ran, 2011-03-31 YinYang bipolar relativity can trace its philosophical origins to ancient Chinese YinYang cosmology which claims that everything has two sides or two opposite but reciprocal poles or energies More specifically this discipline is intended to be a logical unification of general relativity and quantum mechanics YinYang Bipolar Relativity A Unifying Theory of Nature Agents and Causality with Applications in Quantum Computing Cognitive Informatics and Life Sciences presents real world applications of YinYang bipolar relativity that focus on quantum computing and agent interaction This unique work makes complex theoretical topics such as the ubiquitous effects of quantum entanglement logically comprehensible to a vast audience

Visions of Nature Riyan J. G. van den Born, W. T. de Groot, Rob H. J. Lenders, 2006 Visions of nature are the ideas that people hold of what nature is and how we should relate to it These visions are important for the design of democratically grounded landscape and nature policies These contributions were presented at an expert meeting at Radboud University June 2001

On the Moral Nature of the Universe Nancey C. Murphy, George Francis Rayner Ellis, Ellis and Murphy show how contemporary sciences actually support a religiously based ethic of nonviolence not by appealing to the Enlightenment's mechanistic Creator God or revelation's Father God but by discerning the transcendent ground in the laws of nature the emergence of intelligent freedom and the echoes of knoetic self giving in cosmology and biology

The Nature and Growth of Modern Mathematics Edna Ernestine Kramer, 1982 Now available in a one volume paperback this book traces the development of the most important mathematical concepts giving special attention to the lives and thoughts of such mathematical innovators as Pythagoras Newton Poincare and Godel Beginning with a Sumerian short story ultimately linked to modern digital computers the author clearly introduces concepts of binary operations point set topology the nature of post relativity geometries optimization and decision processes ergodic theorems epsilon delta arithmetization integral equations the beautiful ideals of Dedekind and Emmy Noether and the importance of purifying mathematics Organizing her material in a conceptual rather than a chronological manner she integrates the traditional with the modern enlivening her discussions with historical and biographical detail

Flourishing Within Limits to Growth Sven Erik Jørgensen, Brian D. Fath, Søren Nors Nielsen, Federico M. Pulselli, Daniel A. Fiscus, Simone Bastianoni, 2015-07-03 Decades of research and discussion have shown that the human population growth and our increased consumption of natural resources cannot continue there are limits to growth This volume demonstrates how we might modify and revise our economic systems using nature as a model The book describes how nature uses three growth forms biomass information and networks resulting in improved overall ecosystem functioning and co development As biomass growth is limited by available resources nature

uses the two other growth forms to achieve higher resource use efficiency Through a universal application of the three R s reduce reuse and recycle nature thus shows us a way forward towards better solutions However our current approach dominated by short term economic thinking inhibits full utilization of the three R s and other successful approaches from nature Building on ecological principles the authors present a global model and futures scenario analyses which show that implementation of the proposed changes will lead to a win win situation In other words we can learn from nature how to develop a society that can flourish within the limits to growth with better conditions for prosperity and well being

Multiple Choice Questions and Standard Answer Questions for Orthopaedic Trainees Ilias G. Bisbinas, Dimitrios A. Georgiannos, 2024-05-29 In recent times both primary authors have observed that to establish a thorough and effective training program orthopaedic trainees should undertake intensive study of orthopaedic textbooks This should be complemented by daily practical application involving the use of questions including both multiple choice questions MCQs and short answer questions SAQs along with their corresponding solutions This recognition marked the initial phase of developing and composing a book centered around orthopaedic questions We envisage that this publication will function as a valuable companion for each orthopaedic trainee providing prompt access to crucial knowledge and encouraging further study The current volume identified as Part I encompasses all relevant information that an orthopaedic trainee needs to adequately prepare a patient for surgery A subsequent section Part II will delve into knowledge related to regional orthopaedics
