**Ground-based LiDAR** John Kemeny, 2008. LiDAR Light Detection and Ranging, also often referred to as 3D laser scanning, is an emerging three-dimensional mapping technology that employs a laser and a rotating mirror or housing to rapidly scan and image volumes and surficial areas such as rock slopes and outcrops, buildings, bridges, and other natural and man-made objects. Ground-based or terrestrial LiDAR refers to tripod-based measurements as opposed to airborne LiDAR measurements made from airplanes or helicopters. The purpose of this report was to determine whether the new technology of ground-based LiDAR could assist FHWA with highway rock slope stability. This report includes discussions of currently available LiDAR hardware and software, the current state of LiDAR for highway geotechnical applications, rock mass characterization, rockfall characterization, as-built 3D measurements, best practices for field scanning, and for point cloud data processing, and expected trends in the industry in the near future. **IAG 150 Years** Chris Rizos, Pascal Willis, 2016-08-08. This proceedings contains a selection of peer-reviewed papers presented at the IAG Scientific Assembly, Potsdam, Germany, 1-6 September 2013. The scientific sessions were focussed on the definition, implementation, and scientific applications of reference frames, gravity field determination, and applications, the observation and assessment of earth hazards. It presents a collection of the contributions on the applications of earth rotations, dynamics, on observation systems and services, as well as on imaging and positioning techniques and its applications.

**Laser Scanning** Belén Riveiro, Roderik Lindenbergh, 2019-10-18. This book provides an overview on the evolution of laser scanning technology and its noticeable impact in the structural engineering domain. It provides an up-to-date synthesis of the state of the art of the technology for the reverse engineering of built constructions, including terrestrial, mobile, and different portable solutions for laser scanning. Data processing of large point clouds has experienced an important advance in the last years, and thus an intense activity in the development of automated data processing algorithms has been noticed. Thus, this book aims to provide an overview of state of the art algorithms, different best practices, and most recent processing tools in connection to particular applications. Readers will find this a comprehensive book that updates the practice of laser scanning for researchers and professionals, not only from the geomatic domain but also other fields such as structural and construction engineering. A set of successful applications to structural engineering are illustrated, including also synergies with other technologies that can inspire professionals to adopt laser scanning in their day-to-day activity. This cutting-edge edited volume will be a valuable resource for students, researchers, and

professional engineers with an interest in laser scanning and its applications in the structural engineering domain
