Geometry R.S. Millman,G.D. Parker,2012-12-06 This book is intended as a first rigorous course in geometry As the title indicates we have adopted Birkhoff s metric approach i e through use of real numbers rather than Hilbert s synthetic approach to the subject Throughout the text we illustrate the various axioms definitions and theorems with models ranging from the familiar Cartesian plane to the Poincare upper half plane the Taxicab plane and the Moulton plane We hope that through an intimate acquaintance with examples and a model is just an example the reader will obtain a real feeling and intuition for non Euclidean and in particular hyperbolic geometry From a pedagogical viewpoint this approach has the advantage of reducing the reader s tendency to reason from a picture In addition our students have found the strange new world of the non Euclidean geometries both interesting and exciting Our basic approach is to introduce and develop the various axioms slowly and then in a departure from other texts illustrate major definitions and axioms with two or three models This has the twin advantages of showing the richness of the concept being discussed and of enabling the reader to picture the idea more clearly Furthermore encountering models which do not satisfy the axiom being introduced or the hypothesis of the theorem being proved often sheds more light on the relevant concept than a myriad of cases which do
