Practical Hints for Working and Breastfeeding La Leche League International,1983 **Expressing and Storing Breast Milk** Colorado. WIC Program,Colorado. Nutrition Services,1986* **A Preliminary Design of the Manual Breast Pump** Nurul Syazrin Roslan,2009 This study is to design the manual breast pump with an ergonomics approach The problem statement of the study is to solve the musculoskeletal problems among mothers especially those who feed their babies using the manual breast pump Meanwhile the objectives for this study is to design a manual breast pump with an ergonomics approach using the Solidwork and to analyze the designed manual breast pump using the manual calculation The methodology for this project used the survey instrument which is questionnaires and the software for the design stage Result

is the chapter where the analysis of the questionnaires that were distributed to the respondents It is also included the analysis of the main part using the manual calculation Lastly it recovers the conclusion for the project The study hopefully can help the future researcher in order to create and develop the new design for the manual breast pump *Design and Development of a Manual Breast Pump* Nur Atiqah Ramlan, 2010 This thesis deals with design and development of a manual breast pump with an ergonomic approach This project is the further study of the previous project which is the preliminary design of the manual breast pump The purpose of this study is to prevent the musculoskeletal disorder problems among mothers who expressed the breast milk using manual breast pump The objectives of this study is to design a manual breast pump with ergonomics approach using Solidworks to make a prototype of the designed manual breast pump using Rapid Prototyping machine and to validate the designed manual breast pump using simulation process and manual calculation The scope of this project is that the developed manual breast pump is only a prototype and is not readily functional as a commercial product While the validations of the manual breast pump through the simulation software is considered precise The strategy of validation of finite element analysis was developed for this project The finite element analysis was then performed using ALGOR and the bottle part of the design was analyzed using the static stress with linear material model The other part of the design which is the pressure pump was also manually calculated The obtained results indicate that the maximum value of the result shows in the bottom of the bottle due to the surface boundary condition The manual calculation of the pressure pump shows that the design just can produce the maximum pressure of about 4 000 Pa While a good manual breast pump should produce at least about 2 000 Pa However the area is not suitable to be reducing in a great number due to the ergonomics condition
