Anatomic, Physiologic, and Therapeutic Principles of Surgical Diseases Benjamin J. Hazen,Shishir K. Maithel,Ravi R. Rajani,Jahnavi Srinivasan,2023-07-27 Comprehensive and high yield this text is a digestible resource for the major anatomic physiologic and therapeutic principles of surgical diseases Rather than focus on clinical presentation and pre operative management it presents sensible algorithmic approaches to treatment for each pathology with particular attention to operative options This allows the reader to develop a large armamentarium of surgical options to safely treat surgical problems and aid in the decision making process in an organized fashion with critical steps and techniques of specific operations included in each chapter Importantly this book provides a concise list of steps for common surgical operations namely those frequently encountered during the Certifying Oral Board exam after completing residency which is uncommon in the currently available study material Chapters also include suggested readings and summaries of pivotal studies on the specific topics serving as an easy reference for the content provided The topics covered begin with pre operative evaluation and anesthesiology then proceed anatomically across all relevant body systems and organs as well as trauma transplantation pediatric surgery and much more Written with senior level general surgery residents preparing for the qualifying written and certifying oral board examinations clearly in mind it will also be valuable to all levels of trainees preparing for the annual American Board of Surgery In service Training Exam ABSITE as well as medical students with an interest in surgical training and trainees in their fellowship after completing residency

Homeostatic Blood States Theory Audrius Andrijauskas,2008-01-31 Intravenous fluid and blood component resuscitation is an integral part of modern medicine practice in a variety of medical fields However these therapies are usually led by rigid and very approximate guidelines The purpose of creating the Homeostatic blood states theory was to develop more accurate guidelines On the basis of the new theory the following results have been reached 1 The physiological mathematical model explaining blood volume homeostasis

has been created 2 Nomograms for infusion therapy measures blood loss evaluation and calculating red blood cell transfusion amount were proposed 3 Nomograms were built on the background of interfering relationship of blood hematocrit and hemoglobin concentration 4 New guidelines for infusion therapy blood loss evaluation and calculating transfusion amount for proper hematocrit increase were proposed 5 New method for early verification of occult bleeding has been suggested Three major homeostatic blood states were described 1 target state 2 state of maximal isoosmotic plasma dilution and 3 dehydration Target states maintain optimal red cell mass and blood volume correlation Other two maintain critical plasma hydration origin deviations from target state Three new nomograms enable planning and evaluation of infusion therapy and red cell mass transfusion quantitate evaluation of blood loss and early detection of occult bleeding based on the dynamics of blood hematocrit and hemoglobin concentration
