Identification and Characterization of the Anticancer Potential of Indigenous Medicinal Plants of the Arabian Peninsula Sameera Omar Mohammed Balhamar,2016
 Indigenous plant species historically used for their medicinal properties are a tremendous source for bringing newer and safer drugs to the market A concerted effort is needed to characterize their medicinal potential and identify new molecules that could be exploited in modern medicine The current study was undertaken to study the anticancer properties of several indigenous plants that are used by the local population of the Arabian Peninsula and beyond for various medicinal purposes Towards this end we acquired different plant extracts from five plants namely Boswellia sacra BS Cleome

droserifolia CD Terbiu muscatensis TM Orchadenus arabicus OA and Acredocarpus orientalis AO that were screened for their anticancer properties and mechanism of action Of these only the essential oil from Boswellia sacra has recently been shown to have anticancer activity Thirty two different organic extracts were obtained from these native plants Essential oil from Boswellia sacra was used as a control as well as to expand upon its anticancer activity profile Initially the essential oil and the extracts were screened for their anti proliferation potential in two different human cancer cell lines MCF 7 and HeLa to ensure that their anticancer potential was not missed The cell proliferation assay MTT 3 4 5 dimethylthiazol 2 yl 2 5 diphenyltetrazolium bromide was used to study the effect of the oil and various extracts on cell viability in a time and dose dependent manner Once all the extracts had been screened select groups of effective extracts were chosen from each plant for a more in depth analysis in a full panel of human breast cancer cell lines comprising of MCF 7 and MDA MB 231 and their normal counterpart MCF 10A as well as the prototypic human cervical cancer cell line HeLa MCF 7 represents a hormone responsive breast cancer cell line while MDA MB 231 represents a non hormone responsive triple receptor negative breast cancer cell line The mechanism of cell death induced by these extracts was explored by testing the activities of various caspase enzymes induced during apoptosis a major pathway of programmed cell death using caspase specific glow assays and western blot analysis Finally a few isolated compounds and their derivatives obtained from these extracts were acquired from our collaborators and tested to determine whether they could demonstrate the anti proliferative effects observed using the crude extracts and if so whether it was due to apoptosis Test of the extracts using these assays revealed that some of the extracts exhibited anti proliferative activity against the targeted cancer cell lines The anti proliferative effects of some of these extracts were found to be selectively more active against breast cancer cell line than HeLa cells The ATP dependent Cell Titer Glow Luminescent Cell Viability Assay further confirmed the effect of the extracts on cell viability Test of the activity of different caspase enzymes revealed that some of the effective extracts had the capability of inducing apoptosis Western blotting was used to confirm the role of various caspases in the activation of apoptosis Finally isolated compounds from these extracts and their derivatives were screened with the MTT assay for their effect on cell viability One of these isolated compounds has shown promising anti proliferative activity and could induce a specific caspase suggesting activation of caspase dependent apoptosis Thus analyses from these multi pronged approaches have resulted in the identification and characterization of extracts having anticancer potential from five indigenous plant species We are further characterizing their mechanism s of action as well as exploring other cell death pathways that may be induced Overall our results demonstrate that traditional medicinal plants can provide an excellent source of natural raw material to isolate novel anticancer agents enlarging the arsenal of new molecules available to fight cancer

Anticancer plants: Properties and Application Mohd Sayeed Akhtar,Mallappa Kumara Swamy,2018-06-29 Cancer is one of the leading death cause of human population increasingly seen in recent times Plants have been used for medicinal purposes since immemorial times Though several synthetic medicines are useful in treating cancer they are inefficient and unsafe However plants have proved to be useful in cancer cure Moreover natural compounds from plants and their derivatives are safe and effective in treatment and management of several cancer types The anticancer plants such as Catharanthus roseus Podophyllum peltatum Taxus brevifolia Camptotheca acuminata Andrographis paniculata Crateva nurvala Croton tonkinensis Oplopanax horridus etc are important source of chemotherapeutic compounds These plants have proven their significance in the treatment of cancer and various other infectious diseases Nowadays several well known anticancer compounds such as taxol podophyllotoxins camptothecin vinblastine vincristine homoharringtonine etc have been isolated and purified from these medicinal plants Many of them are used effectively to combat cancer and other related diseases The herbal medicine and their products are the most suitable and safe to be used as an alternative medicine Based on their traditional uses and experimental evidences the anticancer products or compounds are isolated or extracted from the medicinally important plants Many of these anticancer plants have become endangered due to ruthless harvesting in nature Hence there is a need to conserve these species and to propagate

them in large scale using plant tissue culture Alternatively plant cell tissue and organ culture biotechnology can be adopted to produce these anticancer compounds without cultivation The proper knowledge and exploration of these isolated molecules or products could provide an alternative source to reduce cancer risk anti tumorigenic properties and suppression of carcinogen activities Anticancer plants Volume 1 Properties and Application is a very timely effort in this direction Discussing the various types of anticancer plants as a source of curative agent their pharmacological and nutraceutical properties cryo preservations and recent trends to understand the basic cause and consequences involved in the diseases diagnosis We acknowledge the publisher Springer for their continuous inspiration and valuable suggestions to improvise the content of this book We further extend our heartfelt gratitude to all our book contributors for their support and assistance to complete this assignment I am sure that these books will benefit the scientific communities including academics pharmaceuticals nutraceuticals and medical practitioners
