Techniques of Model-based Control Coleman Brosilow, Babu Joseph, 2002 Annotation In this book two of the field s leading experts bring together powerful advances in model based control for chemical process engineering From start to finish Coleman Brosilow and Babu Joseph introduce practical approaches designed to solve real world problems not just theory The book contains extensive examples and exercises and an accompanying CD ROM contains hands on MATLAB files that supplement the examples and help readers solve the exercises a feature found in no other book on the topic European Symposium on Computer Aided Process Engineering /15th International Symposium on Process Systems Engineering Flavio Manenti, G.V. Rex Reklaitis, 2024-06-27 The 34th European Symposium on Computer Aided Process Engineering 15th International Symposium on Process Systems Engineering contains the papers presented at the 34th European Symposium on Computer Aided Process Engineering 15th International Symposium on Process Systems Engineering joint event It is a valuable resource for chemical engineers chemical process engineers researchers in industry and academia students and consultants for chemical industries Presents findings and discussions from the 34th European Symposium on Computer Aided Process Engineering 15th International Symposium on Process Systems Engineering joint Resource Efficiency of Processing Plants Stefan Krämer, Sebastian Engell, 2017-12-14 This monograph provides foundations methods guidelines and examples for monitoring and improving resource efficiency during the operation of processing plants and for improving their design The measures taken to improve their energy and resource efficiency are strongly influenced by regulations and standards which are covered in Part I of this book Without changing the actual processing equipment the way how the processes are operated can have a strong influence on the resource efficiency of the plants and this potential can be exploited with much smaller investments than needed for the introduction of new process technologies This aspect is the focus of Part II In Part III we discuss physical changes of the process technology such as heat integration synthesis and realization of optimal processes and industrial symbiosis. The last part deals with the people that are needed to make these changes possible and discusses the path towards a resource efficiency culture Written with industrial solutions in mind this text will benefit practitioners as well as the academic community **Process Equipment** and Plant Design Subhabrata Ray, Gargi Das, 2020-05-29 Process Equipment and Plant Design Principles and Practices takes a holistic approach towards process design in the chemical engineering industry dealing with the design of individual process equipment and its configuration as a complete functional system Chapters cover typical heat and mass transfer systems and equipment included in a chemical engineering curriculum such as heat exchangers heat exchanger networks evaporators distillation absorption adsorption reactors and more The authors expand on additional topics such as industrial cooling systems extraction and topics on process utilities piping and hydraulics including instrumentation and safety basics that supplement the equipment design procedure and help to arrive at a complete plant design The chapters are arranged in

sections pertaining to heat and mass transfer processes reacting systems plant hydraulics and process vessels plant auxiliaries and engineered safety as well as a separate chapter showcasing examples of process design in complete plants This comprehensive reference bridges the gap between industry and academia while exploring best practices in design including relevant theories in process design making this a valuable primer for fresh graduates and professionals working on design projects in the industry Serves as a consolidated resource for process and plant design including process utilities and engineered safety Bridges the gap between industry and academia by including practices in design and summarizing relevant theories Presents design solutions as a complete functional system and not merely the design of major equipment Provides design procedures as pseudo code flow chart along with practical considerations Petrochemistry Martin Bajus, 2020-01-03 A comprehensive textbook on petrochemical conversion processes for petroleum and natural gas fractions as produced by refinery operations This innovative textbook provides essential links between the chemical sciences and chemical technology between petrochemistry and hydrocarbon technology. K. Pant, Sanjay Kumar Gupta, Ejaz Ahmad, 2021-04-01 This book is part of a two volume work that offers a unique blend of information on realistic evaluations of catalyst based synthesis processes using green

chemistry principles and the environmental sustainability applications of such processes for biomass conversion refining and petrochemical production. The volumes provide a comprehensive resource of state of the art technologies and green chemistry methodologies from researchers academics and chemical and manufacturing industrial scientists. The work will be of interest to professors researchers and practitioners in clean energy catalysis green chemistry chemical engineering and manufacturing and environmental sustainability. This volume focuses on catalyst synthesis and green chemistry applications for petrochemical and refining processes. While most books on the subject focus on catalyst use for conventional crude fuel oriented refineries this book emphasizes recent transitions to petrochemical refineries with the goal of evaluating how green chemistry applications can produce clean energy through petrochemical industrial means. The majority of the chapters are contributed by industrial researchers and technicians and address various petrochemical processes including hydrotreating hydrocracking flue gas treatment and isomerization catalysts.
