

Functional Aspects of the MIS

- A management information system is organized according to the business functionality of an organization.
- Thus an MIS contains systems in areas of accounting, human resources, marketing, manufacturing, research and development, legal services, operations/support, and finance. See figure next page.
- Each functional system uses its own set of function-specific subsystems, all of which interface with both the TPS and the MIS.
- Each functional system requires different information and support for decision making; but they share some common information needs.
