Distributed Virtual Machines Gary J. Nutt, 2005 The Common Language Infrastructure CLI is a multiple language runtime system first implemented as the .NET Common Language Runtime CLR. In March 2002 Microsoft released the Shared Source CLI implementation aka Rotor for general educational use. The CLI technology can be used to address a spectrum of software design and development barriers that cut across compilers, runtime systems, and operating systems. This book focuses on the parts of the technology that are directly related to Distributed Virtual Machine technology. It covers assembly architecture, assembly loading, downloading, the execution engine, security, CLI interobject communication, remoting, and more. This book is available entirely online at <http://www.bc.com/nutt/cli/> for professor evaluation and classroom use and for general readers interested in the Rotor CLI. *InfoWorld*, 2001-06-25 InfoWorld is targeted to Senior IT professionals. **Grid Technologies** M. P. Bekakos, George A. Gravvanis, Hamid Arabnia, 2006 Grid computing denotes an approach to utilize distributed resources that are not subject to centralized control This approach fulfils computing requirements arising within the context of current high performance computing applications

especially in the field of computational science and engineering This idea is analogous to an electric power network grid where power generators are distributed but the users are able to access electric power without bothering about the source of energy and its location Current grid enabling technologies consist of stand alone architectures A typical architecture provides middleware access to various services at different hierarchical levels Computational grids enable the sharing selection and aggregation of a wide variety of geographically distributed computational resources such as supercomputers clusters of computers storage systems data sources instruments people etc and present them as a single unified resource for solving large scale computations and data intensive computing applications e g molecular modeling for drug design brain activity analysis high energy physics etc Grid computing is a new emerging research area aiming to promote the development and advancement of technologies that provide seamless and scalable access to wide area distributed resources
