Nanoscaled Semiconductor-on-Insulator Structures and Devices S. Hall,A.N. Nazarov,V.S. Lysenko,2007-09-04

This proceedings volume constitutes an archive of the contributions of the key speakers who attended the NATO Advanced Research Workshop on Nanoscaled Semiconductor On Insulator Structures and devices held in the Tourist and Recreation Centre Sudak Crimea Ukraine from 15 to 19 October 2006 The semiconductor industry has sustained a very rapid growth during the last three decades through impressive technological developments which have resulted in products with higher performance and lower cost per function After many years of development it is now confidently predicted that semiconductor on insulator materials will enter and increasingly be used by manufacturing industry The wider use of semiconductor especially silicon on insulator materials will not only enable the benefits of these materials to be demonstrated but also will drive down the cost of substrates which in turn will stimulate the development of other novel devices and applications Thus the semiconductor on insulator materials of today are not only the basis for modern microelectronics but also for future nanoscale devices and ICs In itself this trend will encourage the promotion of the skills and ideas generated by researchers in the Former Soviet Union and Eastern Europe Indeed one of the goals of this Workshop is to promote the development of SOI technologies worldwide

Lane,2020-11-13 This book contains several recent articles written about broken spacetime symmetry The context is curved spacetime as used in General Relativity and the broken symmetry most discussed is Local Lorentz Symmetry While there is currently no experimental evidence for broken Lorentz symmetry in nature it is an object of great study from theoretical phenomenological and experimental perspectives All three appear in this volume There are three review articles in this volume Fabian Kislak summarizes astrophysical probes of Lorentz violation especially those using polarized light Michael Seifert discusses a particular limit of the Standard Model Extension that is useful for relating theoretical and experimental ideas and Marco Schreck describes circumstances under which gravitational Cerenkov radiation could arise from Lorentz violation The other three articles focus more on original research Charles Lane and Quentin Bailey relate a particular theory of noncommutative geometry to the curved spacetime Standard Model Extension Yuri Bonder and Christobal Corral consider the existence of spacetime symmetries in models with explicit Lorentz violation and Pawel Gusin et al study a spacetime transformation that relates the inside and outside of a nonrotating black hole Process Technology International ,1973
