

SERVICING THE KONICA C35

by Andy Berger

INTRODUCTION

The Konica C35 is a compact 35mm camera incorporating such features as programmed auto exposure, built in flash guide number system and rangefinder for precise focusing.

The shutter, made by Copal for Konica as well as several other Japanese camera manufacturers, is a novel design using only two blades. These blades are used for both speed and aperture control in conjunction with a governor assembly set by a mechanical trap-needle exposure system. The exposure meter is a CdS cell system with the cell mounted above the lens on the nameplate ring where it will automatically compensate for any filters used.

DISASSEMBLY

The bottom cover is secured by three screws. To remove the top cover, unscrew the wind lever retaining screw and remove the wind lever. Underneath is a retaining ring. This retaining ring and a screw under the rewind knob are all that hold the top cover. Lift off the top cover and unsolder the sync wire.

You do not have to remove the top cover to adjust the rangefinder. The horizontal or infinity adjustment is beneath an access screw in the film compartment, Fig. 1. Vertical alignment is made through an access hole underneath the hot-shoe decorator plate, Fig. 2.

The front standard and complete lens assembly are removed as one

subassembly. Remove the self-timer lever and peel off the leatherette. There is another easy adjustment point. Under the small plate now visible on the wind side of the camera is an eccentric used to adjust exposure by changing the position at which the exposure meter is trapped by the mechanical exposure system, Fig. 3. This is the first adjustment to be made on an improperly exposing camera after the mechanical system is checked and found to be operating properly.

Continuing with the disassembly remove the nameplate retaining ring, Fig. 4, and lift out the ring. Unsolder the CdS cell leads, Fig. 5. Here is another adjustment point. With the nameplate ring removed, lens collimation can now be ad-
