**Macrohistory and Globalization** Grinin, Leonid, 2012-06-01 The present monograph considers some macrohistorical trends along with the aspects of globalization. Macrohistory is history on the large scale that tells the story of the entire world or of some major dimensions of historical process. For the present study three aspects of macrohistory have been chosen: These are technological and political aspects as well as the one of historical personality. Taken together they give a definite picture of unfolding historical process which is described from the beginning of human society formation to the present day and near future. The combination in the monograph title of the two terms macrohistory and globalization is in no way artificial. On the contrary the connection of these terms is organic at least as the real goal of macrohistory is to find meaning in the past so as to create new possibilities of meaning for the future. The analysis of globalization also includes three aspects: political, economic and futurological. As today the world may well be regarded as being at the start of a new global reconfiguration. The author presents his ideas of the world prospective, political and in some respects social economic development basing on the analysis of macrohistory and contemporary globalization processes. The monograph also considers some global scenarios of the World System's near future.

performance of global economies when the environment is not recognised as a capital and when the ecosystem is overlooked towards sustainable development Seck begins with an analysis of standard macroeconomic framework and policy practice He argues with reference to environmental accounting literature that environmental capital must form an integral component of economic measurement This paves the way for an alternative environmental macroeconomics framework for policy analysis that promotes sustainable development The book demonstrates how environmental capital can be measured with reference to select OECD countries and provides a methodology for analysing how macroeconomic goals are related to a steady state economy Seck then concludes with a summary of the conflict between current economic growth and ecosystem preservation and outlines possible policy improvements and directions for research Rethinking Sustainable Development is an invaluable reference for policymakers as well as researchers and students of environmental economics sustainable development and macroeconomics
