Economic and Business issues in Retrospect and prospect Kerem Gökten,Ahmet Arif Eren,2019-03-10 There is a strong view that economics is the academic discipline that best represents the claim of positive science among social sciences Economics has undergone significant transformations after its emergence as a science Despite all these transformations the feature containing positive and normative elements has not changed While economists from the political economy tradition focus on qualitative studies that relate to other social sciences especially political science and history a group of economists adopt the qualitative methods of natural sciences to analyze economic problems There is a debate among economists on how to understand social reality and what kind of science the economy should be Business is a discipline that has declared its relative independence from economics over time Business is a research field that encompasses a wide range of areas ranging from organizational behavior of individuals to the firm s production and marketing strategies This book contains articles on essential topics related to these disciplines which have an in separable relationship between them Academicians contributing to the book have produced works on current topics of discussion as well as key subjects that remain important in economics and management **Handbook of Research on**

Economics of Economy Pricing Marin Muzhani, 2023 The economy of the industrialized countries in the 21st century has already moved to a new level of mass production and technology never seen before thanks in part to globalization advanced technologies new organization management methods and innovative supply chain A relatively large number of mass produced commodities characterized as non premium and services in Western economies are somehow sold at discounts rather than regular prices at a much higher frequency that was never seen before This phenomenon has completely changed how we look at the theory of the firm in microeconomics This book is indented to introduce new ideas and theories by challenging the current modern micro and macro economic theories In a globalized world the economies of advanced countries have entered a new phase called economy pricing where most of the mass commodities are sold at a low price during certain periods of the year called sales events In addition to low prices most industrialized countries have had record low inflation low interest rates low growth and low unemployment rates This book will contend how the Economy Pricing System is about to revolutionize how people look at a real economy s micro and macro effects
