and succinct textbook for the classroom that blends clinical notes on assessment and management together with case based
instructional approaches to cardiopulmonary care for acute and ambulatory care patients This one of a kind text describes
current approaches that cover traditional physical therapist management strategies and includes evidence based chapters on
early mobilization and exercise training on a wide range of cardiopulmonary patient groups The updated Second Edition
presents twenty four cases that were designed to complement each chapter topic and represent the most common pulmonary
cardiac and neurological conditions that are typically managed in cardiopulmonary care These cases have been carefully
selected and developed over several years to illustrate a spectrum of clinical issues essential for the preparation of the entry
level therapist The very interactive nature of the case history approach is engaging and provides the opportunity to work
through many of the steps of the clinical decision making process Cardiopulmonary Physical Therapy Management and Case
Studies Second Edition also includes answer guides for the questions posed in the assessment and management chapters as
well as for the twenty four cases New in the Second Edition Twenty four carefully selected evidence based cases designed to
go hand in hand with chapter topics An international perspective that is relevant to physical therapy practice in several
countries Detailed chapter on noninvasive ventilation and mechanical ventilation Several chapters describe early
mobilization and exercise training for a range of cardiopulmonary patient groups including those admitted to an intensive
care unit Faculty will benefit from the Talk Me Through PowerPoint slides which provide a great opportunity for independent
learning and complement classroom teaching The two fold evidence and case based learning approach used by Dr W Darlene
