## Introduction

The structure and function of muscles can be intricate, but their naming follows a systematic convention that provides significant insights into their characteristics. This guide examines the various criteria used to name muscles, facilitating easier identification and understanding.

## Naming Based on Origin and Insertion

- **Origin:** The fixed attachment point of a muscle, typically located near the midline or on the less movable part of the skeleton.
- **Insertion:** The end point where the muscle attaches to bone or tendon, often the more movable attachment.

Examples:

- **Sternocleidomastoid Muscle:** Named for its points of origin (sternum and clavicle) and insertion (mastoid process of the temporal bone).

## Naming Based on Actions

Muscles are often named according to the action they perform.

Types of Actions:

- **Flexion:** Bending movement.
- **Extension:** Straightening movement.
