*Shock Formation in Small-Data Solutions to 3D Quasilinear Wave Equations* Jared Speck, 2016-12-07 In 1848 James Challis showed that smooth solutions to the compressible Euler equations can become multivalued thus signifying the onset of a shock singularity Today it is known that for many hyperbolic systems such singularities often develop However most shock formation results have been proved only in one spatial dimension Serge Alinhac's groundbreaking work on wave equations in the late 1990s was the first to treat more than one spatial dimension In 2007 for the compressible Euler equations in vorticity free regions Demetrios Christodoulou remarkably sharpened Alinhac's results and gave a complete description of shock formation In this monograph Christodoulou's framework is extended to two classes of wave equations in three spatial dimensions It is shown that if the nonlinear terms fail to satisfy the null condition then for small data shocks are the only possible singularities that can develop Moreover the author exhibits an open set of small data whose solutions form a shock and he provides a sharp description of the blow up These results yield a sharp converse of the fundamental result of Christodoulou and Klainerman who showed that small data solutions are global when the null condition is satisfied Readers who master the material will have acquired tools on the cutting edge of PDEs fluid mechanics hyperbolic conservation laws wave equations and geometric analysis

**Nonlinear Dynamics and Chaos with Student Solutions Manual** Steven H. Strogatz, 2018-09-21 This textbook is aimed at newcomers to nonlinear dynamics and chaos especially students taking a first course in the subject The presentation stresses analytical methods concrete examples and geometric intuition The theory is developed systematically starting with first order differential equations and their bifurcations followed by phase plane analysis limit cycles and their bifurcations and culminating with the Lorenz equations chaos iterated maps period doubling renormalization fractals and strange attractors

*An Introduction to Nonlinear Analysis and Fixed Point Theory* Hemant Kumar Pathak, 2018-05-19 This book systematically introduces the theory of nonlinear analysis providing an overview of topics such as geometry of Banach spaces differential calculus in Banach spaces monotone operators and fixed point theorems It also discusses degree theory nonlinear matrix equations control theory differential and integral equations and inclusions The book presents surjectivity theorems variational inequalities stochastic game theory and mathematical biology along with a large number of applications of these theories in various other disciplines Nonlinear analysis is characterised by its applications in numerous interdisciplinary fields ranging from engineering to space science hydromechanics to astrophysics chemistry to biology theoretical mechanics to biomechanics and economics to stochastic game theory Organised into ten chapters the book shows the elegance of the subject and its deep rooted concepts and techniques which provide the tools for developing more realistic and accurate models for a variety of phenomena encountered in diverse applied fields It is intended for graduate and undergraduate students of mathematics and engineering who are familiar with discrete mathematical structures differential and integral equations operator theory measure theory Banach and Hilbert spaces

locally convex topological vector spaces and linear functional analysis      **Approximating Solutions in Infinite Horizon Optimization** William Paul Cross, 1995      *Solutions of  $D$  and  $\bar{D}$  with Small Support* Robert Bakula, 1997 Two related problems are studied in this thesis We refer to them as the real and the complex case In the real case we are interested in hulls  $\hat{K}$  of compact sets  $K$  in  $\mathbb{R}^n$  A hull  $\hat{K}$  is a minimal compact set in  $\mathbb{R}^n$  that contains  $K$  and has the property that the equation  $df\phi$  has a solution  $f$  whose support is arbitrarily close to  $\hat{K}$  for any given  $q$  form  $\phi$  on  $\mathbb{R}^n$  whose support is contained in  $K$  In the complex case the analogous problem for the equation  $\bar{\partial} f = \phi$  on  $\mathbb{C}^n$  is studied here  $\phi$  is a  $0, q$  form In both cases we prove that hulls exist but are not unique unless  $\hat{K} = K$  or  $q = 1$  In the real case we use de Rham theory to characterize hulls  $\hat{K}$  as the minimal compact sets containing  $K$  and satisfying the condition  $i_* \alpha = 0$  where  $i: \hat{K} \rightarrow \mathbb{R}^n$  is the inclusion  $H_{n-q}(\hat{K}) \rightarrow H_{n-q}(\mathbb{R}^n)$  is a natural map on the real homology groups induced by the inclusion  $i: \hat{K} \hookrightarrow \mathbb{R}^n$  As a consequence we observe that  $\hat{K} = K$  precisely when  $H_{n-q}(\hat{K}) = 0$  Next we turn to the study of polyhedral hulls We prove that they always exist and are obtained by adding to  $K$  a finite number of simplicial  $n - q + 1$  chains that lie in the complement of  $K$  and have their boundary in  $K$  Finally we apply these results to prove a theorem about the topology of hyperplane sections of  $K$  in  $\mathbb{R}^n$  To study of the complex case is complicated by the fact that geometric and analytic dualities for the Dolbeault cohomology hold only under certain conditions We use Andreotti Grauert theory to find some conditions that imply  $\hat{K} = K$  and in case  $\hat{K}$  is polyhedral prove some estimates on the dimension of  $\hat{K} \setminus K$  In particular we show that there exist polyhedral hulls that satisfy  $\dim \hat{K} \setminus K \leq 2n - q + 1$  and that arbitrary hulls can be approximated by such polyhedral hulls Next fibered hulls are considered They turn out to be related to polynomial hulls and provide some interesting examples As an application of the theory developed we prove that  $\bar{\partial}$  cohomology classes of open subsets of  $\mathbb{C}^n$  can be represented by  $0, q$  forms supported arbitrarily close to a closed set of Hausdorff dimension at most  $2n - q$       **New Technical Books** New York Public Library, 1991      *Books in Print*, 1982      Mathematical Reviews, 1985      **Whitaker's Cumulative Book List**, 1964      The Closing of Resonance Horns for Periodically Forced Oscillators Bruce Barlett Peckham, 1988      Subject Guide to Books in Print, 2001      **Journal of analysis and its application**, 2004      *International Journal of Applied Mathematics*, 2000      Annales Scientifiques de L'École Normale Supérieure, 1979      **Critical Point Theorems and Applications to Differential Equations** Elvira Alves de B. e Silva, 1988      **AAAI 99** American Association for Artificial Intelligence, 1999 AAAI proceedings describe innovative concepts techniques perspectives and observations that present promising research directions in artificial intelligence The annual AAAI National Conference and Innovative Applications of Artificial Intelligence Conference provide a forum for information exchange and interaction among researchers from all disciplines of AI Contributions include theoretical experimental and empirical results The technical papers published in this proceedings were selected by a rigorous double blind review process The National Conference papers cover a myriad of topics including agents artificial intelligence and the world wide web
