Classifying Mutations: DNA sequence

1. Mutations can be classified by how the DNA sequence is altered

- **Substitution:** a single nucleotide is substituted with another (A to G)
- **Insertion:** one or more nucleotides are added into the DNA sequence
- **Deletion:** one or more nucleotides are removed from the DNA sequence

The diagram illustrates three types of DNA mutations using a sequence of colored blocks representing nucleotides. The original sequence is A-T-G-C-A-T-T-T (represented by blue, orange, green, red, blue, orange, and purple blocks).
 - **Substitution mutation:** A single nucleotide is replaced. In the example, the 4th nucleotide (red, C) is replaced by a blue nucleotide (A).
 - **Insertion mutation:** One or more nucleotides are added. In the example, a blue nucleotide (A) is added at the 5th position.
 - **Deletion mutation:** One or more nucleotides are removed. In the example, the 5th nucleotide (blue, A) is removed.

- **Deletion:** One or more nucleotides are removed from the DNA sequence
