Lee S Building Maintenance Management 4th Edition:

Lee's Building Maintenance Management Paul Wordsworth, 2001-01-09 Building maintenance now accounts for over half the construction industry's output. Therefore, there has been growing recognition of the role of the building maintenance manager. Since it was first written by Reg Lee, this book has played a significant part in developing the framework of the subject, covering in a systematic and comprehensive way a wide range of issues from the legal to the technical and financial. The Fourth Edition, the first in 14 years, has been substantially revised by Paul Wordsworth of Liverpool John Moores University. It provides an overview of new developments, changes in legislation, and information technology, a more scientific approach to the section on defect diagnosis, and a new chapter on the increasingly important subjects of conservation and the environment. The book provides a core text for undergraduates of building surveying and students of facilities management.

Building Maintenance Processes and Practices Abdul Lateef Olanrewaju, Abdul-Rashid Abdul-Aziz, 2014-11-14 This book is designed to be an inclusive for the best practice approach to building maintenance management where the processes, procedures, and operational systems meet a high standard of professional and academic competence. It offers a different perspective on building maintenance management by presenting the schematic building maintenance value chain model and its implementation in Malaysian university buildings. The findings show an improvement to building performance, lower maintenance cost, building sustainability, and increased maintenance service user satisfaction. The learning outcomes and summaries provided for each chapter and the extensive use of tables and figures add to the readability of the text. Though the book is based on data from Malaysia, it is useful for a much wider audience, and the informal writing style makes it an interesting reference source. This book is valuable for readers who are practitioners, professionals, and for academic institutions that offer courses in the building field, including architecture, quantity surveying, civil engineering, building and facility management, property management, real estate. It will also be of interest to governments and others involved in the construction industry.

The reader will discover why and how to use facility assets to achieve business goals and strategies by aligning them as a resource.
