**Holographic and Speckle Interferometry** Robert

Jones, Catherine Wykes, 1989-01-26 Holographic and speckle interferometry are optical techniques which use lasers to make non contracting field view measurements at a sensitivity of the wavelength of light on optically rough i.e non mirrored surfaces They may be used to measure static or dynamic displacements the shape of objects and refractive index variations of transparent media As such these techniques have been applied to the solution of a wide range of problems in strain and vibrational analysis non destructive testing NDT component inspection and design analysis and fluid flow visualisation This book provides a self contained unified theoretical analysis of the basic principles and associated opto electronic techniques for example Electronic Speckle Pattern Interferometry In addition a detailed discussion of experimental design and practical application to the solution of physical problems is presented In this new edition the authors have taken the opportunity to

include a much more coherent description of more than twenty individual case studies that are representative of the main uses to which the techniques are put The Bibliography has also been brought up to date
