

LESSON 9: INTERPRETATION OF ASSESSMENT DATA

REMEMBER!

Type of Test Scores	Description	How to Interpret
Raw score	<ul style="list-style-type: none"> - It is simply unaltered data from a test or observation. It is recorded in its original form by a researcher before being subjected to any statistical analysis. Typically raw scores are converted to standard scores or percentiles before being used in comparisons 	<ul style="list-style-type: none"> - An individual's raw score is converted to a number indicating the percent of people in the reference group who scored below the test taker. For example, a score at the 70th percentile means that the individual's score is the same as or higher than the scores of 70% of those who took the test.
Percentage Score	<ul style="list-style-type: none"> - A percentage score is a number expressed as a fraction of 100. 	<ul style="list-style-type: none"> - The percentage of correct answers, or score, is the number of correct answers divided by the total number of questions, multiplied by 100.
Percentage Rank	<ul style="list-style-type: none"> - It is the percentage of the scores in the frequency distribution which are lower. - This means that the percentage of the examinees in the norm group who score below the score of interest (Crocker & Algina, 1986). - It is used to clarify the interpretation of scores on standardized tests. 	<ul style="list-style-type: none"> - Percentile ranks are often expressed as a number between 1 and 99, with 50 being the average. So if a student scored a percentile rank of 87, it would mean that they performed better than 87% of the other students in his norm group.
Standard Score	<ul style="list-style-type: none"> - The standard score in statistic is the number of standard deviations by which the value of a raw score is above or below the mean value of what is being observed or measured. 	<ul style="list-style-type: none"> - The value of the z-score tells you how many standard deviations you are away from the mean. If a z-score is equal to 0, it is on the mean. A positive z-score indicates the raw score is higher than the mean average. For example, if a z-score is equal to +1, it is 1 standard deviation above the mean. Obtained from raw scores by norming information gathered when the test is developed.
Z- score	<ul style="list-style-type: none"> - Is the number of standard deviation unit score is above or below the mean of a given distribution. A positive Z- score = measures the 	<p>Formula is standard score z is the difference of each value in the data set x minus the mean of all values on the data set divided by s which is the standard deviation.</p> <p>$Z = \frac{\text{Data point (X)} - \text{Mean}}{\text{Standard Deviation}}$</p>

Miscellaneous grade bestanden Technical University of Braunschweig Institut f r Anglistik und Amerikanistik language English abstract How can this topic be used in the classroom What can our students learn from it In my opinion the Great Exhibition should be used by teachers as an example for the Victorian Age when teaching British English history in schools due to the fact that it perfectly exemplifies the contrast between humans industrialization and nature In the further

procedure I will examine the historical context of the Great Exhibition 1851 and conduct an analysis about how a lesson focusing on this topic could be constructed Furthermore I want to focus on how industry and nature are presented during the Great Exhibition and how the humans in between dealt with these topics

A Practical Logic of Cognitive Systems Dov M. Gabbay, John Woods, 2005-05-02

The present work is a continuation of the authors acclaimed multi volume A Practical Logic of Cognitive Systems After having investigated the notion of relevance in their previous volume Gabbay and Woods now turn to abduction In this highly original approach abduction is construed as ignorance preserving inference in which conjecture plays a pivotal role Abduction is a response to a cognitive target that cannot be hit on the basis of what the agent currently knows The abducer selects a hypothesis which were it true would enable the reasoner to attain his target He concludes from this fact that the hypothesis may be conjectured In allowing conjecture to stand in for the knowledge he fails to have the abducer reveals himself to be a satisficer since an abductive solution is not a solution from knowledge Key to the authors analysis is the requirement that a conjectured proposition is not just what a reasoner might allow himself to assume but a proposition he must defeasibly release as a premiss for further inferences in the domain of enquiry in which the original abduction problem has arisen The coverage of the book is extensive from the philosophy of science to computer science and AI from diagnostics to the law from historical explanation to linguistic interpretation One of the volume s strongest contributions is its exploration of the abductive character of criminal trials with special attention given to the standard of proof beyond a reasonable doubt Underlying their analysis of abductive reasoning is the authors conception of practical agency In this approach practical agency is dominantly a matter of the comparative modesty of an agent s cognitive agendas together with comparatively scant resources available for their advancement Seen in these ways abduction has a significantly practical character precisely because it is a form of inference that satisfices rather than maximizes its response to the agent s cognitive target The Reach of Abduction will be necessary reading for researchers graduate students and senior undergraduates in logic computer science AI belief dynamics argumentation theory cognitive psychology and neuroscience linguistics forensic science legal reasoning and related areas Key features Reach of Abduction is fully integrated with a background logic of cognitive systems The most extensive coverage compared to competitive works Demonstrates not only that abduction is a form of ignorance preserving inference but that it is a mode of inference that is wholly rational Demonstrates the satisficing rather than maximizing character of abduction The development of formal models of abduction is considerably more extensive than one finds in existing literature It is an especially impressive amalgam of sophisticated conceptual analysis and extensive logical modelling Reach of Abduction is fully integrated with a background logic of cognitive systems The most extensive coverage compared to competitive works Demonstrates not only that abduction is a form of ignorance preserving inference but that it is a mode of inference that is wholly rational Demonstrates the
