

Let's say you're a biologist studying the growth of a bacterial population over time. You've collected data on the number of bacteria at different time points, and you want to predict the population size at a future time point.

Task 1: Linear Regression In this task, you'll use linear regression to model the relationship between time and bacterial population size.

Dataset: You have a dataset with two features: Time (in hours) and Population Size (in millions of bacteria).

Using the dataset, you'll fit a linear regression model to the data. The model will output a single value representing the predicted population size at a given time point.

1. Which of the following best describes the relationship between Time and Population Size?

2. Which of the following best describes the relationship between Time and Population Size?

3. Which of the following best describes the relationship between Time and Population Size?

4. Which of the following best describes the relationship between Time and Population Size?

5. Which of the following best describes the relationship between Time and Population Size?

6. Which of the following best describes the relationship between Time and Population Size?

Task 2: Logistic Regression In this task, you'll use logistic regression to model the relationship between Time and Population Size.

Using the dataset, you'll fit a logistic regression model to the data. The model will output a probability representing the likelihood of a given time point being associated with a specific population size.

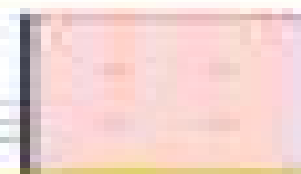

1. Which of the following best describes the relationship between Time and Population Size?

2. Which of the following best describes the relationship between Time and Population Size?
