Le Mythe Climatique:

Le Mythe climatique Benoît Rittaud, 2015-06-25T00:00:00+02:00 L apparent consensus sur la responsabilité de l'humanité dans l'évolution du climat est en train de s'effriter. Cet ouvrage présente un point de vue sceptique sur la thèse carbocentriste selon laquelle le réchauffement global récent aurait pour cause les émissions humaines de gaz carbonique. Ciblant sa critique sur quelques points clés, il expose en termes simples et accessibles les faiblesses, notamment statistiques, de certains arguments longtemps considérés comme décisifs. La reconstitution de l'histoire de la température globale, l'analyse des carottes glaciaires, la fiabilité des modèles climatiques. Derrière ces déficiences particulières se profile une question philosophique plus profonde touchant la nature même des théories carbocentristes. En liant la thèse actuelle sur le climat à d'autres épisodes de l'histoire des sciences, l'auteur avance que nous avons affaire ici à un nouveau cas de science pathologique. Il attire enfin l'attention, toujours du point de vue scientifique, sur le dangereux glissement observé aujourd'hui dans certains discours qui tentent de faire passer notre planète du statut d'objet à celui de sujet. L'importance des enjeux politiques, économiques et sociaux du débat sur le climat demande que l'on accorde une attention particulière à ces analyses. Benoît Rittaud, mathématicien, est maître de conférences à l'université Paris XIII. Il est l'auteur de nombreux ouvrages de mathématiques destinés à un large public.

Histoire climatique de la Terre Jean Chaline, Jacques Lang, 2024-08-20 Le climat a des causes multiples qui le modifient sans cesse : facteurs galactiques, solaires, astronomiques, terrestres, dont les circulations atmosphériques et océaniques, ainsi que les éruptions volcaniques. Le climat a toujours varié au cours de l'histoire de la Terre, et il n'a jamais totalement gelé ni dégelé. La lumière des résultats du débat scientifique, ce n'est pas le gaz carbonique qui induit la température, et il n'est donc pas responsable du réchauffement climatique actuel. En effet, toutes les échelles du Paléozoïque, que l'actuel, les deux paramètres sont indépendants. En fait, il apparaît que l'évolution des températures est corrélatrice de celle des variations du nombre de taches solaires et de la distance Terre-Soleil pendant toutes les fluctuations chaudes ou froides enregistrées depuis la préhistoire, bien avant la révolution industrielle. Ceci confirme que c'est bien l'activité solaire qui provoque ces fluctuations de températures. Actuellement, personne ne sait ce qu'il adviendra du climat dans les prochaines années. En observant le développement et l'ampleur du 25^e cycle solaire qui vient de débuter, nous devrions cependant pouvoir valuer la future tendance climatique lors de son prochain cycle maximum en juillet 2025. Auteurs : Jean Chaline est paléontologue et Directeur de recherche maître au CNRS à l'Université de Bourgogne ; Jacques Lang est professeur de géologie maître à la même Université.

Migration et changement climatique Jamila Alaktif, Stéphane Callens, 2021-03-01 Cet ouvrage vise mieux saisir la manière dont les cultures humaines interagissent au regard du changement climatique. Il conjugue le passé et le présent sur une longue période allant des premières formes d'organisation à la gestion organisationnelle dans le monde contemporain. Migration et changement climatique emprunte une approche initiée par le philosophe Michel Foucault qui définit la spiritualité comme la recherche, la pratique, l'expérience par lesquelles le sujet opère sur lui-même les transformations nécessaires pour accéder à la vérité. L'ouvrage analyse les changements

climatiques de grande ampleur qui apportent des transformations significatives dans les premières cultures humaines. Il s'interroge également en temps de changement climatique d'origine anthropique sur le rôle des organisations et les laboratoires de nouveaux cadres d'action.

Mythes et réalités d'un désert convoité le Sahara Jean Bisson, 2003-10-01. Dans l'imaginaire collectif la simple vocation du Sahara déclenche une avalanche de mythes et de fantasmes. Le pays envoi te subjugue. Les Sahariens longtemps abandonnés leur sort ont exploité dans les années 60 les richesses minières et les hydrocarbures couplés d'ambitieux plans d'équipement. Le monde saharien a basculé de la ruralité à la cité. Comment les sahariens réagissent-ils face à ce bouleversement ? Le Sahara est-il l'Eldorado dont certains ne cessent de vanter les infinies potentialités ? Quant au développement n'est-il pas devenu un insidieux facteur de désertification ? Quelques décennies de recul permettent de dresser un état des lieux du plus grand désert du monde.
