

# IT TERMINOLOGY

TERMS	DEFINITIONS
access point:	A device that allows wireless-equipped computers and other devices to communicate with a wired network.
accessibility:	As specified in Section 508 of the 1998 Rehabilitation Act, the process of designing and developing Web sites and other technology that can be navigated and understood by all people, including those with visual, hearing, motor, or cognitive impairments. This type of design also can benefit people with older screen software and hardware.
address:	Identifies the location of an Internet resource. Examples: an e-mail address (jules@outapost.com), a web address (http://www.outapost.com), or an Internet address (192, 168, 100, 1).
alias:	A short, easy-to-remember name created for use in place of a longer, more complicated name; commonly used in e-mail applications. Also referred to as a "nickname".
applet:	A program capable of running on any computer regardless of the operating system.
application:	A program designed for a specific purpose, such as word processing or graphic design.
attachment:	In this context, a file that is sent along with an e-mail message. ASCII (plain text) files may be appended to the message text, but other types of files are encoded and sent separately (common formats that can be selected include MIME, Binhex, and UueNcode).
authentication:	The process of identifying yourself and the verification that you're who you say you are. Computers where restricted information is stored may require you to enter your username and password to gain access.
backbone:	A term that is often used to describe the main network connections that comprise the Internet or other major network.
bandwidth:	A measurement of the amount of data that can be transmitted over a network at any given time. The higher the network's bandwidth, the greater the volume of data that can be transferred.
binary file:	A file that cannot be read by standard text editor programs like Notepad or Simple Text. Examples: documents created by applications such as Microsoft Word or WordPerfect or DOC files with the extension ".doc" or ".docx".
bit:	A binary digit (either 0 or 1); it is the most basic unit of data that can be recognized and processed by a computer.
blog:	Refers to a weblog, a web page that contains journal-like entries and links that are updated daily for public viewing.
Bluetooth:	A wireless networking technology that allows users to send voice and data from one electronic device to another via radio waves.
bridge:	A device used for connecting two Local Area Networks (LANs) or two segments of the same LAN; bridges forward packets without analyzing or re-routing them.
browser:	A program used to access World Wide Web pages. Examples: Firefox, Safari or Internet Explorer.
cache:	Refers to: 1) a region of computer memory where frequently accessed data can be stored for rapid access; or 2) a optional file on your hard drive where such data also can be stored. Examples: Internet Explorer and Firefox have options for defining both memory and disk cache. The act of storing data for fast retrieval is called "caching".
client:	A program or computer that connects to and requests information from a server. Internet Explorer or Firefox. A client program also may be referred to as "client software" or "client-server software".
