## ENGINE ARCHITECTURE

1.6L engines are the highest expression of design and engineering efficiency that 1.6L (1000) engines available on the market place. They are highly innovative engines designed to be able to comply with the regulations on torque and emissions emissions that will be introduced in the near future. Designed with innovative techniques and manufactured with advanced working processes, they are the result of hundreds of years of design and engineering tradition as well as of an expert international cooperation. The excellent performance of 1.6L engines originates from isolation and exhaust ducts of new design which by improving the gas exchange process, the intake air turbulence is improved, thus enabling the complete exploitation of the new injection system capacity.

The new criteria chosen in defining the parameters setting the construction conditions, reliability and injection enable to obtain new balance between high performance and consumption reduction. 1.6L engines can be fitted with a mechanical pump or a fuel electronic controlled "Common Rail" fuel supply system. Every technical solution has been accurately devised so as to ensure qualitative product perfection. The configuration of the engine itself has been designed in such a way as to facilitate access to each individual part thus reducing maintenance time. Cylinder head fitted with two valves per cylinder new timing control new design connecting rods and aluminum-alloy pistons are components of an engine fitted with 43% less elements than an engine of equivalent performance.
