Ksscience Paper 2009:

Climate Change Science Compendium 2009 Catherine P. McMullen, Jason Ramsey Jabbour, 2009 This Climate Change Science Compendium presents some of the issues and ideas that have emerged since the close of research for consideration by the Intergovernmental Panel on Climate Change IPCC Fourth Assessment Report over three years ago Focusing on work that brings new insights to aspects of Earth System Science at various scales it discusses findings from the International Polar Year and from new technologies that enhance our abilities to see the Earth's Systems in new ways Evidence of unexpected rates of change in Arctic sea ice extent ocean acidification and species loss emphasizes the urgency needed to develop management strategies for addressing climate change

Handbook of Data Intensive Computing Borko

Furht, Armando Escalante, 2011-12-10 Data Intensive Computing refers to capturing managing analyzing and understanding data at volumes and rates that push the frontiers of current technologies The challenge of data intensive computing is to provide the hardware architectures and related software systems and techniques which are capable of transforming ultra large data into valuable knowledge Handbook of Data Intensive Computing is written by leading international experts in the field Experts from academia research laboratories and private industry address both theory and application Data intensive computing demands a fundamentally different set of principles than mainstream computing Data intensive applications typically are well suited for large scale parallelism over the data and also require an extremely high degree of fault tolerance reliability and availability Real world examples are provided throughout the book Handbook of Data Intensive Computing is designed as a reference for practitioners and researchers including programmers computer and system infrastructure designers and developers This book can also be beneficial for business managers entrepreneurs and investors

open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus

Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only

gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point

Verification and Validation in Scientific Computing William L. Oberkampf, Christopher J. Roy, 2010-10-14 Advances in scientific computing have made modelling and simulation an important part of the decision making process in engineering science and public policy This book provides a comprehensive and systematic development of the basic concepts principles and procedures for verification and validation of models and simulations The emphasis is placed on models that are described by partial differential and integral equations and the simulations that result from their numerical solution The methods described can be applied to a wide range of technical fields from the physical sciences engineering and technology and industry through to environmental regulations and safety product and plant safety financial investing and governmental regulations This book will be genuinely welcomed by researchers practitioners and decision makers in a broad range of fields who seek to improve the credibility and reliability of simulation results It will also be appropriate either for university courses or for independent study

China in 2020 Angang Hu, 2012-11-26 Explains how China as the world's largest emerging market will impact global economic growth FDI flows energy consumption climate change and other arenas with a proposed strategic framework that would guide the country's rise while maximizing positive impacts and minimizing any negative externalities Provided by publisher

Energy Resources for Human Settlement in the Solar System and Earth's Future in Space William A. Ambrose, James F. Reilly II, Douglas C. Peters, 2013-03-14 The book's purpose is to provide the

quantitative foundation for beginning to think about developing energy and minerals outside of Earth's atmosphere that are necessary to support scientific missions space and extra terrestrial scientific stations and permanent colonies and ultimately expand Earth's economy beyond the near earth environment to include space resources We cannot envision a situation where all resources required for future space activities are exported from Earth therefore this book clearly illustrates that an effective economy is possible beyond Earth's surface when we consider the resources available in near Earth space Our first audience is members of AAPG American Institute of Mining Metallurgical and Petroleum Engineers AIME and other professionals engaged in energy and resource development As energy professionals we are concerned on a daily basis with providing the necessary energy and minerals required for our growing world population and the increasing standard of living that comes with ample energy availability And more than anything else AAPG members are explorers We are the professionals who have pushed back the boundaries of our resource base from capturing petroleum resources from surface seeps to drilling onshore wells to extract oil and gas and to venturing offshore into increasingly difficult and hostile environments to supply the cheap and abundant energy made available by our advances in technology There are more similarities than differences between deepwater exploration and development and space exploration Beyond our own members however our audience is every rational human being who understands human health and well being quality of life education and freedom are dependent on the energy and minerals that support our advanced civilization Space is the next frontier and as the world civilization expands beyond Earth's surface we hope this publication serves to illustrate there are abundant opportunities to support and maintain and in fact allow to prosper civilization's expansion into space Publisher's website

[Managing Famine, Flood and Earthquake in China](#) Lauri Paltemaa, 2015-10-05 China suffers frequently from many types of natural disasters which have affected the lives of many millions of Chinese The steps which the Chinese state has taken to prevent disasters mitigate their consequences and reconstruct in the aftermath of disasters are therefore key issues This book examines the single metropolis of Tianjin in northern China a city which has suffered particularly badly from natural disasters the great famine of 1958-61 the great flood of 1963 and the great earthquake of 1976 It discusses how the city managed these disasters what policies and measures were taken to prevent and mitigate disasters and to promote reconstruction afterwards It also explores who suffered from and who benefited from the disasters Overall the book shows how disaster management was erratic sometimes managed highly efficiently and in other cases disappointingly delayed and inept It concludes that although the Maoist state possessed formidable resources disaster management was always constrained by other political and economic considerations and was never an automatic priority

Early Warming Nancy Lord, 2012-01-10 In Shishmaref Alaska new seawalls are constructed while residents navigate the many practical and bureaucratic obstacles to moving their entire island village to higher ground Farther south inland hunters and fishermen set out to grow more of their own food and to support the reintroduction of wood bison an ancient species well suited to

expected habitat changes First Nations people in Canada team with conservationists to protect land for both local use and environmental resilience In Early Warming Alaskan Writer Laureate Nancy Lord takes a cutting edge look at how communities in the North where global warming is amplified and climate change effects are most immediate are responding with desperation and creativity This beautifully written and measured narrative takes us deep into regions where the indigenous people who face life threatening change also demonstrate impressive conservation ethics and adaptive capacities Underpinned by a long acquaintance with the North and backed with scientific and political sophistication Lord s vivid account brings the challenges ahead for us all into ice water clarity *White Paper on Science and Technology*, 2013

Affairs, United Nations, 2009 The separation in practice of climate change and development agendas has distorted the global
debate on the two biggest policy challenges facing the international community According to the Survey an integrated
approach based on the concept of sustainable development is urgently needed It argues that mitigation and adaptation can
move forward effectively only if they are part of a consistent development strategy built around a massive investment led
transformation along low emissions high growth paths The Survey also contends that a critical role must be played by
developmental States able to mobilise public finance and build appropriate technological capacity **Report of Activities**
