Journal Impact Factor :

Does the Journal Impact Factor Help Make a Good Indicator of Academic Performance? Sudhanshu K.

Mishra, 2010 Is journal impact factor a good measure of research merit This question has assumed a great importance after the notification of the University Grants Commission Minimum Qualifications for Appointment of Teachers and other Academic Staff in Universities and Colleges and Measures for the Maintenance of Standards in Higher Education Regulations 2009 on September 23rd 2009 Now publication of research papers articles in reputed journals has become an important factor in assessment of the academic performance of teachers in colleges and universities in India One of the measures of reputation and academic standard rank or importance of a journal is the so called Impact Factor This study makes a detailed statistical analysis of Journal Impact Factors across the disciplines It finds that if journal impact factor is used to assess the academic performance of individuals for the purpose of selection promotion etc and it is not borne in mind that due to vast differences in the nature of distribution of impact factors across the disciplines they are not justifiably comparable a below average scholar in the one discipline will rank higher and will be honored and benefitted more than another scholar in some other discipline wherein the journal impact factor is adversely skewed It may be noted that in the university departments there are specializations with low impact factor journals and other specializations with very high impact factor journals But the teachers researchers of different specializations in the departments compete with each other for promotion In this milieu the researchers with an unfortunate specialization wherein the journal impact factor is meagre or adversely skewed would receive injustice is plainly predetermined Therefore a measure such as the h index which quantifies the quality as well as productivity of an individual author scholar would be more appropriate than the journal impact factor The h index may be fine tuned and hence the g index or Tol s index may be used Nevertheless even the h index and the Tol s index would not be appropriate to the purpose of inter disciplinary or inter specialization comparisons A more informed and balanced judgment of the expert committee for selection appointment and promotion purposes will continue to be extremely important The Impact Factor of Scientific and Scholarly Journals Tibor Braun, 2007

Multidimensional Journal Evaluation Stefanie Haustein, 2012-04-26 Scientific communication depends primarily on publishing in journals The most important indicator to determine the influence of a journal is the Impact Factor Since this factor only measures the average number of citations per article in a certain time window it can be argued that it does not reflect the actual value of a periodical This book defines five dimensions which build a framework for a multidimensional method of journal evaluation The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011 *Medinfo 2007* Klaus A. Kuhn, James R. Warren, Tze-Yun Leong, 2007 The papers presented are refereed and from all over the world They reflect the breadth and depth of the field of biomedical and health informatics covering topics such as health information systems knowledge and data management education standards consumer health and human factors emerging technologies sustainability organizational and economic issues genomics and

Journell,2022-11-10 Along with the infamous Reviewer 2 journal editors are a leading cause of angst among scholars When editors are bad at their jobs careers are damaged reputations of journals suffer and the overall scholarship within a field is weakened Yet despite their importance to the practice of academia most editors do not receive any formal training on the editing process Even well published authors face a steep learning curve when navigating all of the moving parts of a scholarly journal and providing quality feedback to authors This book is intended to be a guide for scholarly journal editors It walks current and prospective editors through the various steps of the editing process including establishing an editorial vision creating editorial teams boards interpreting reviewers comments and writing decision letters and publicizing published articles and improving journal metrics A secondary goal of the book is to provide authors with a peek inside the process of journal editing By better understanding the decisions that editors make authors can make more informed choices about which journals they should submit their work as well as improve their chances for publication **Improved,**

and presents various deterministic and stochastic models of science dynamics and research productivity The book shows that many famous fat tail distributions as well as many deterministic and stochastic models and processes which are well known from physics theory of extreme events or population dynamics occur also in the description of dynamics of scientific systems and in the description of the characteristics of research productivity This is not a surprise as scientific systems are nonlinear open and dissipative

How Robust are Journal Rankings Based on the Impact Factor? Christian Seiler, Klaus Wohlrabe, 2014 It is well known that the distribution of citations to articles in a journal is skewed We ask whether journal rankings based on the impact factor are robust with respect to this fact We exclude the most cited paper the top 5 and 10 cited papers for 100 economics journals and recalculate the impact factor Afterwards we compare the resulting rankings with the original ones from 2012 Our results show that the rankings are relatively robust This holds both for the 2 year and the 5 year impact factor
