

To ensure your motor is getting the protection it needs, perform a visual inspection of the various lubrication points at least once a week during regular seasonal operation (five sources) that the motor is being used at least once a week. Follow the recommendations given in the Lubrication Chart at the end of this section and perform the various lubricating services at least every 50 days when the load is operated in fresh water or every 30 days when the load is operated in salt, brackish or polluted waters. We can at least ensuring you should perform these services more often, as these meet the your needs expectations.

■ Jet drive models require one form of lubrication every time that they are used. The jet drive bearing should be greased, following the procedure given in this section, after every day of boating. But don't worry, it only takes a minute once you're done it before.

### Electric Starter Motor Pinion

Periodic lubrication of the starter motor pinion is required on all electric start models, except 50 degree (75-115 hp) (7.000oz) 74 and 100 Jet-175 hp (2.000oz) 90 motor.

### RECOMMENDED LUBRICANT

Use EumulexJohnson Starter Pinion Grease, General Electric Vermulite or an equivalent lubricant.

### LUBRICATION

- See Figures 7 and 8

The starter pinion is the gear and shaft assembly located on the top of the starter motor as it is mounted to the engine. When grease is applied to the starter, the gear on the pinion bearing slides upward to meet and mesh with the gear teeth on the outside of the flywheel. Periodically apply a small amount of lubricant to the sliding surface of the starter pinion in order to prevent excessive wear or possible binding on the shaft.

■ On models that require periodic lubrication, some access is normally provided to the starter pinion. Though, it is possible that a flywheel cover may need to be removed on a few models.

### Engine Cover Latches

For some reason, not all EumulexJohnson Mercury Mariner maintains the periodic lubrication of the engine cover latches including one of the author's own motor and owner's manual. But, most models are equipped with a grease fitting for each cover latch and/or exposed metal-to-metal contact surfaces that will benefit from periodic lubrication.

### RECOMMENDED LUBRICANT

Use EumulexJohnson Triple-Guard, or equivalent water-resistant marine grease for lubrication.

Fig. 7 Apply lubricant to the sliding surface of the electric starter pinion

Fig. 8 In most cases, models that require periodic lubrication provide easy access to the starter pinion

### LUBRICATION

- See Figures 9 and 10

Although the sliding surfaces of all cover latches can benefit from an application of grease, the design of the latches used on some models (those equipped with grease fittings) makes periodic greasing necessary to prevent the latches from binding or wearing. Most 50 Jet-115 hp (1.000oz) 600cc motors are equipped with 3 grease fittings on the engine cover, 2 fittings on the lower outside of one end of the cover, and one fitting at the other end. Other models, such as most 75-115 hp (2.000oz) 94 and 100 Jet-175 hp (2.000oz) 90 motor have a single grease fitting on each side (located facing opposite ends of the engine block).

Depending on the latch type, either apply a small amount of grease to the metal surfaces using an applicator brush or use a grease gun to pump grease into the pins fitting facing outward from the latch assembly.

### Jet Drive Bearing

- See Figure 11

Jet drive models covered by this manual require special attention to ensure that the drive shaft bearing remains properly lubricated.

After each day of use, the jet drive bearing should be properly lubricated using a grease gun. Also, after every 50 hours of fresh water operation or every 15 hours of saltwater/polluted water operation, the drive bearing grease must be replaced. Follow the appropriate procedure.

### RECOMMENDED LUBRICANT

Use EumulexJohnson Offshore Bearing grease or equivalent water-resistant NLGI No. 1 lubricant.

### DAILY BEARING LUBRICATION

- See Figures 12 and 13

A grease fitting is located under a vent hose on the lower port side of the jet drive. Disconnect the hose from the fitting, then use a grease gun to pump enough grease to the fitting to just fill the vent hose. Pump grease into the fitting until the jet grease just starts to come out from the passage through the lower bearing and then reconnect the hose to the fitting.

■ Do not attempt to just grasp the vent hose and pull, as it is a tight fit and when it does come off, you'll probably get tying if you didn't prepare for it. The easier method of removing the vent hose from the fitting is to defeat the hose to one side and wrap it free from the fitting.

Fig. 9 If equipped, use the grease fittings normally found at the front ...
