Exploring the Interaction between Health-promoting and Health Risk Behaviours in Health Huixuan Zhou,Feng Jiang ,Yi-lang Tang,2024-05-28 Health related behaviours play positive or negative roles in people's health For instance health risk behaviours such as sedentary behaviours e.g binge watching TV and playing computer games the use of alcohol tobacco or

other substances and lack of sleep have been found to negatively affect the physical and mental health of people. On the other hand, some studies show that health promoting behaviours such as physical activity and healthy dietary habits can mitigate or reverse the negative effects of health risk behaviours on health outcomes. In the meantime, some studies indicate that the harmful effects of some health risk behaviours may not be mitigated by health promoting behaviours. For instance, some studies show that sedentary behaviours and physical activity are independently associated with some physical and mental health outcomes. Interventions to increase physical activity with and without decreasing sedentary time lead to different health outcomes. Clearly, more research is needed to show the interaction between health promoting behaviours and health risk behaviours in health, which could shed light on the management of health related behaviours.

Encyclopedia of Medical Media & Communications George Thomas Kurian, 1996. Here, under one cover, you will have access to nearly 500 major medical book publishers in 39 countries, a listing of over 12 000 medical journals and 800 electronic databases.
