

# ATI RN MATERNITY PROCTORED EXAM

## VERSION 26

A nurse is providing discharge teaching to a postpartum client who had no immunity to rubella and received the rubella immunization. Which of the following statements by the client indicates an understanding of the teaching?

☐ "I should see my provider in 2 weeks for a second dose of the immunization."

**INCORRECT**

The client will be checked for immunity with her next pregnancy.

☐ "I will need to prevent getting pregnant for 28 days after I receive this immunization."

**CORRECT**

The client needs to practice contraception to prevent pregnancy for 28 days after receiving the rubella immunization due to the risk of teratogenic effects on the fetus.

☐ "I will have a blood test at my next postpartum visit to see if I have immunity to rubella."

**INCORRECT** ~~ANSWER~~

The CDC does not recommend routine post immunization serologic testing at the next visit.

☐ "I cannot breastfeed my baby because I received this immunization."

**INCORRECT**

Women who are breastfeeding can receive the rubella immunization. According to the CDC, breastfeeding should not delay a client from receiving the rubella immunizations.

A nurse is caring for a postpartum client who is breastfeeding her newborn and reports that her nipples have become sore and cracked. Which of the following statements should the nurse make?

☐ "Begin each feeding with the breast that is most sore, so the infant spends less time on it."

**INCORRECT**

When starting the letdown reflex, it is hard to begin with the breast that is most sore. This makes the breast milk flow more quickly on the second, more sore breast. Warm compresses and massage can also hasten milk flow.

☐ "Use breast pads with a moisture-proof lining to keep the nipples moist."

**INCORRECT**

The nurse should advise the client to remove breast pads promptly to avoid further skin irritation. The client also should avoid pads with plastic linings that retain moisture.

☐ "Breastfeed the baby less frequently to give the nipples time to heal."

**INCORRECT**

The client should avoid engorgement by nursing more often. If her breasts do become engorged, the client should express enough milk to soften the areola if it is too hard for the newborn to grasp easily.

☐ "Apply colostrum to the nipples after feeding to help them heal."

**CORRECT**

~~ANSWER~~

Colostrum and breast milk have healing properties and can help reduce soreness. Applying warm water or wet teething compresses to the nipples is also soothing and promotes healing.
