A skeletal muscle represents an organ of the muscular system and is composed of several kinds of tissues. These tissues include skeletal muscle tissue, nervous tissue, blood, and various connective tissues.

Each skeletal muscle is surrounded by connective tissue. The connective tissue often extends beyond the end of a muscle, providing an attachment to other muscles or to bones. Connective tissue also extends into the structure of a muscle and separates it into compartments.

PURPOSE OF THE EXERCISE

To review the structure of a skeletal muscle.

LEARNING OBJECTIVES

After completing this exercise, you should be able to

1. describe how connective tissue is associated with muscle tissue within a skeletal muscle;
2. name and locate the major structures of a skeletal muscle fiber on a model;
3. distinguish between the origin and insertion of a muscle;
4. describe the general actions of prime movers, synergists, and antagonists.

PROCEDURE

1. Review a textbook section on *skeletal muscle tissue*.
2. Reexamine the microscopic structure of skeletal muscle by observing a prepared microscope slide of this tissue. Use figure 18.1 of skeletal muscle tissue to locate the following features:

skeletal muscle fiber (cell)

nuclei

striations (alternating light and dark)
3. Review a textbook section on *structure of a skeletal muscle*.
4. Study figures 18.2 and 18.3.
5. Examine the torso and locate examples of fascia, tendons, and aponeuroses. Locate examples of tendons in your own body.
6. Complete Part A of Laboratory Report 18.

DEMONSTRATION

Examine the fresh round beefsteak. It represents a cross section through the beef thigh muscles. Note the white lines of connective tissue that separate the individual skeletal muscles. Also note how the connective tissue extends into the structure of a muscle and separates it into small compartments of muscle tissue. Locate the epimysium and the perimysium of the deep fascia.

7. Examine the model of the skeletal muscle fiber and locate the following:

sarcolemma
sarcoplasma
myofibril

myosin filament
actin filament

sarcomere
