Andersen, Daniel J. Conley, 2010-05-30 Coastal eutrophication has been and still remains an important issue for the scientific community Despite many efforts to mitigate coastal eutrophication the problems associated with eutrophication are still far from being solved This book focusses on the most recent scientific results in relation to specific eutrophication issues e g definition s and causes nutrient loads cycling and limitation reference conditions primary effects and secondary effects trend reversal oligotrophication as well as links to other pressures climate change and top down control It also focusses on monitoring and modelling of coastal eutrophication and adaptive and science based nutrient management strategies The book is based on selected papers from the Second International Symposium on Research and Management of Eutrophication in Coastal Ecosystems held 20-23 June 2006 in Nyborg Denmark *Metabolic Interactions Between Bacteria and Phytoplankton* Xavier Mayali, Sonya Dyhrman, Chris Francis, 2018-06-06 The cycling of energy and elements in aquatic environments is controlled by the interaction of autotrophic and heterotrophic processes In surface waters of lakes rivers and oceans photosynthetic microalgae and cyanobacteria fix carbon dioxide into organic matter that is then metabolized by heterotrophic bacteria and perhaps archaea Nutrients are remineralized by heterotrophic processes and subsequently enable phototrophs to grow The organisms that comprise these two major ecological guilds are numerous in both numbers and in their genetic diversity leading to a vast array of physiological and chemical responses to their environment and to each other Interactions between bacteria and phytoplankton range from obligate to facultative as well as from mutualistic to parasitic and can be mediated by cell to cell attachment or through the release of chemicals The contributions to this Research Topic investigate direct or indirect interactions between bacteria and phytoplankton using chemical physiological and or genetic approaches Topics include nutrient and vitamin acquisition algal pathogenesis microbial community structure during algal blooms or in algal aquaculture ponds cell cell interactions chemical exudation signaling molecules and nitrogen exchange These studies span true symbiosis where the interaction is evolutionarily derived as well as those of indirect interactions such as bacterial incorporation of phytoplankton produced organic matter and man made synthetic symbiosis synthetic mutualism
