Microbial Biosorption Of Metals:

Microbial Biosorption of Metals Pavel Kotrba, Martina Mackova, Tomas Macek, 2011-01-13 Heavy metals always pose serious ecological risks when released into the environment due to their elemental non degradable nature regardless of their chemical form This calls for the development of efficient and low cost effluent treatment and metal recuperation technologies for contaminated waste water not only because regulatory limits need to be met but also because the waste itself can be a resource for certain precious metals Biosorption is a general property of living and dead biomass to rapidly bind and abiotically concentrate inorganic or organic compounds from even very diluted aqueous solutions As a specific term biosorption is a method that utilizes materials of biological origin biosorbents formulated from non living biomass for the removal of target substances from aqueous solutions Recent research on biosorption provides a solid understanding of the mechanism underlying microbial biosorption of heavy metals and related elements This book gathers review articles analyzing current views on the mechanism and bio chemistry of biosorption the performance of bacterial fungal and algal biomass and the practical aspects of biosorbent preparation and engineering It also reviews the physico chemical evaluations of biosorbents and modelling of the process as well as the importance of biosorption during heavy metal removal using living cells It is a reference work for scientists environmental safety engineers and R D specialists who wish to further promote biosorption research and use the accumulated knowledge to develop and build industrial applications of biosorption in heavy metal separation technologies

Biosorption of Heavy Metals Bohumil Volesky, 1990-08-15 This state of

the art volume represents the first comprehensively written book which focuses on the new field of biosorption This fascinating work conveys essential fundamental information and outlines the perspectives of biosorption It summarizes the metal sorbing properties of nonliving bacterial fungal and algal biomass plus highlights relevant metal binding mechanisms This volume also discusses the aspects of obtaining and processing microbial biomass and metal chelating chemicals into industrially applicable biosorbent products Microbiologists chemists and engineers with an interest in new technological and scientific horizons will find this reference indispensable Sorption and Biosorption Bohumil Volesky,2003 **Handbook of Metal-Microbe Interactions and Bioremediation** Surajit Das,Hirak Ranjan Dash,2017-04-07 Around the World metal pollution is a major problem Conventional practices of toxic metal removal can be ineffective and or expensive delaying and exacerbating the crisis Those communities dealing with contamination must be aware of the fundamentals advances of microbe mediated metal removal practices because these methods can be easily used and require less remedial intervention This book describes innovations and efficient applications for metal bioremediation for environments polluted by metal contaminates **Biosorption** Jan Derco,Branislav Vrana,2018-07-18 Municipal and industrial wastewaters contain a wide spectrum of pollutants Their effective removal presents a challenge for water treatment technology Biosorption of nutrients and pollutants has been used in sewage treatment since the discovery of the activated sludge process It is a passive uptake process by which pollutants are adsorbed on the surface of cell walls and or dissolved in structures of microorganism cells that are present in sludge Sorbed pollutants remain in the sludge and can be potentially released back into the environment depending on their condition and the reversibility of the pollutant sludge interaction An overview of typical biosorption applications for the removal of nutrients organic pollutants and metals in wastewater treatment is provided in different areas of their use for the protection of aquatic ecosystems and human health This book will be of interest to operators of wastewater treatment plants and sludge treatment and disposal facilities as well as to researchers and university students in the field of environmental engineering **Women in Microbial Physiology and Metabolism: 2023** Jie Xiao,Ilana Kolodkin-Gal ,Maria Filippa Addis,2024-06-24 After the well received 2022 collection Frontiers in Microbiology is proud to host this Research Topic celebrating women s work and achievements in the field of Microbial Physiology and Metabolism Alongside International Women s Day and Women s History Month 2023 we will collectively embrace equity in the microbiology community There is continued gender disparity within core STEM subjects According to UNESCO Institute for Statistics just 33% of the world s researchers are women While the number of women attending university is growing they still represent the minority of doctoral students and researchers Women remain under represented in the highest level of academia holding just 26% of full professorships This is even more skewed in industry with just 3% of STEM industry CEOs being women As highlighted by UNESCO science and gender equality are essential to ensure sustainable development
