Broadening the Genetic Base of Grain Legumes Mohar Singh, Ishwari Singh Bisht, Manoranjan Dutta, 2014-10-28

Grain legumes play significant and diverse role in the farming systems and provide nutrition security to the largely vegetarian and relatively poorer people around the world. These are ideal crops for achieving three simultaneous developmental goals viz reducing poverty improving human health and nutrition and enhancing ecosystem resilience. Globally grain legumes are the second most important crop group next only to cereals but a large proportion of area of it is under rainfed low input systems as compared to cereals contributing to lower yields. The other important factor responsible for reduced yield in grain legumes is the narrow genetic base of the present day pulse varieties. In order to break the yield barriers of these cultivars new sources of genes alleles need to be identified and suitably incorporated into the adapted background. The information on various aspects of grain legume improvement although has been considerable in the recent past these information are highly scattered and not available at one place. The present book consists of comprehensive and latest crop wise information on important grain legumes of the world including their distribution gene pool systematics status of genetic and genomic resources production constraints traits of importance crop improvement methodologies both conventional as well as contemporary and future strategies to be adopted for comprehensive grain legume improvement in various agro ecological target areas of the globe. The chapters have been contributed by eminent crop experts from across the world engaged in research in their respective crops for the past several years thus providing a rare insight into the crop specific constraints and prospects drawing from their rich overall experience. The book therefore will be a useful source of information to the grain legume researchers students policy planners and developmental experts alike. Practical Manual on Crop Improvement-I (Kharif) Banshidhar ,Priyanka Jaiswal, Digvijay Singh, D. K. Upadhyay, 2025-09-17 *A New English Dictionary on Historical Principles* James Augustus Henry Murray, Henry Bradley, Sir William Alexander Craigie, Charles Talbot Onions, 1909 **The Hutchinson Encyclopedia of Science** ,1998 Whether it s the planet the petri dish or the platform this reference attempts to shed some light on the subject. It includes over 10 000 entries and many articles describing discoveries and ground breaking experiments and is fully cross referenced. *Plant Nutrient Acquisition* N. Ae, J. Arihara, K. Okada, A. Srinivasan, 2013-11-11 New research reveals that plants actively acquire nutrients the acquisition process is not a passive one in which plants simply wait for dissolved nutrients to come closer to their roots. In fact plants play a far more active role than once was understood to be possible in nutrient acquisition and in adaptation to problem soils. This book presents an excellent overview and summary of new concepts of plant nutrient acquisition mechanisms and sets forth their practical implications in crop production. The scope is wide ranging from biochemical molecular and genetic analysis of nutrient acquisition to global nutritional problems. Especially noteworthy are the sections on the cell apoplast phosphorus solubilizing organisms and direct uptake of macro organic molecules. With contributions by leading scientists

worldwide the book provides an invaluable resource for researchers in plant and environmental sciences and in agronomy and other branches of agriculture *The St. Andrews University Calendar for the Year ...* University of St. Andrews,1903
