Discovery-Based Learning in the Life Sciences Kathleen M. Susman, 2015-06-30 For nearly a decade scientists educators and policy makers have issued a call to college biology professors to transform undergraduate life sciences education As a gateway science for many undergraduate students biology courses are crucial to addressing many of the challenges we face such as climate change sustainable food supply and fresh water and emerging public health issues While canned laboratories and cook book approaches to college science education do teach students to operate equipment make accurate measurements and work well with numbers they do not teach students how to take a scientific approach to an area of interest about the natural world Science is more than just techniques measurements and facts science is critical thinking and interpretation which are essential to scientific research Discovery Based Learning in the Life Sciences presents a different way of organizing and developing biology teaching laboratories to promote both deep learning and understanding of core concepts while still teaching the creative process of science In eight chapters the text guides undergraduate instructors in creating their own discovery based experiments The first chapter introduces the text delving into the necessity of science education reform The chapters that follow address pedagogical goals and desired outcomes incorporating discovery based laboratory experiences realistic constraints on such lab experiments model scenarios and alternate ways to enhance student understanding The book concludes with a reflection on four imperatives in life science research climate food energy and health and how we can use these laboratory experiments to address them Discovery Based Learning in the Life Sciences is an invaluable guide for undergraduate instructors in the life sciences aiming to revamp their curriculum inspire their students and prepare them for careers as educated global citizens **Biology/science Materials** Carolina Biological Supply

many areas of biology These studies do not necessarily share a unique identifying factor This work unites the different areas of research and allows users regardless of their background to navigate through the most essential concepts with ease saving them time and vastly improving their understanding The field of biophysics counts several journals that are directly and indirectly concerned with the field There is no reference work that encompasses the entire field and unites the different areas of research through deep foundational reviews Comprehensive Biophysics fills this vacuum being a definitive work on biophysics It will help users apply context to the diverse journal literature offering and aid them in identifying areas for further research Chief Editor Edward Egelman E I C Biophysical Journal has assembled an impressive world class team of Volume Editors and Contributing Authors Each chapter has been painstakingly reviewed and checked for consistent high quality The result is an authoritative overview which ties the literature together and provides the user with a reliable background information and citation resource The Macmillan Guide to Correspondence Study Modoc Press,1996

Conversions of Renewable Feedstocks for Sustainable Biorefineries Georgios Papadogianakis,Roger Arthur Sheldon,Yulong Wu ,Dmitry Yu. Murzin,2024-08-23 Today there is growing interest in aqueous phase catalytic conversions for the valorization of renewable biomass based feedstocks for biorefineries to produce in a sustainable way biofuels chemicals power energy materials pharmaceuticals and food This is because of the highly polar nature of water which makes it an ideal medium to convert polar biomass based lignocellulose cellulose hemicellulose lignin with high oxygen content and their upgraded products such as hydrophilic carbohydrates platform chemicals and their derivatives Another reason which makes water the solvent of choice is that water itself is involved either as a reagent or as a byproduct even in large amounts in typical conversions for the valorization of biomass The obtained intermediates further react in the aqueous medium often without any separation and purification to manufacture more valuable products This results in substantial energy savings lower emissions and economic benefits Furthermore water could act as a catalyst in conversions of biomass based feedstocks such as in liquefaction reactions under subcritical conditions Moreover novel types of catalytic reactivity have been observed in the aqueous solvent not only with water soluble transition metal catalytic complexes but also with conventional heterogeneous catalysts and catalytic nanoparticles in a broad spectrum of different reactions such as inter alia aldol condensations and hydrogenation reactions For example in the aqueous phase hydrogenation of the biomass based key platform chemical levulinic acid into valerolactone and beyond employing heterogeneous catalysts and nanoparticles the presence of water has a beneficial effect and accelerates the reaction rates whereas in organic solvents much lower activities were observed This promotional effect of water in the hydrogenation of levulinic acid was proved by many experimental and
