Life Orientation Exam 2014:

Capturing Social and Behavioral Domains and Measures in Electronic Health Records Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Recommended Social and Behavioral Domains and Measures for Electronic Health Records, 2015-01-08 Determinants of health like physical activity levels and living conditions have traditionally been the concern of public health and have not been linked closely to clinical practice. However, if standardized social and behavioral data can be incorporated into patient electronic health records (EHRs), those data can provide crucial information about factors that influence health and the effectiveness of treatment. Such information is useful for diagnosis, treatment choices, policy, health care system design, and innovations to improve health outcomes and reduce health care costs.

Capturing Social and Behavioral Domains and Measures in Electronic Health Records Phase 2 identifies domains and measures that capture the social determinants of health to inform the development of recommendations for the meaningful use of EHRs. This report is the second part of a two-part study. The Phase 1 report identified 17 domains for inclusion in EHRs. This report pinpoints 12 measures related to 11 of the initial domains and considers the implications of incorporating them into all EHRs. This book includes three chapters from the Phase 1 report in addition to the new Phase 2 material. Standardized use of EHRs that include social and behavioral domains could provide better patient care, improve population health, and enable more informative research. The recommendations of **Capturing Social and Behavioral Domains and Measures in Electronic Health Records Phase 2** will provide valuable information on which to base problem identification, clinical diagnoses, patient treatment outcomes assessment, and population health measurement.

Research on Emotion and Learning: Contributions from Latin America Camilo Hurtado-Parrado, Carlos Gantiva, Leonardo A. Ortega, Alexander Gómez-A, Lucas Cuenya, Javier Leonardo Rico, 2020-05-11 Latin America has increased its share of world scientific publications by nearly twofold during the last two decades, approximately from 2 to 4%. Despite this positive trend, the scholarly impact of scientific research produced in the region, measured in terms of citation rate, remains low. Two interrelated factors that contribute to this situation are that most research groups tend to work in isolation or in local, sporadic collaboration, and results are often published in journals that are not indexed in major citation databases, e.g., SCOPUS or Web of Science. Ultimately, part of Latin American high-quality research seems to remain hidden from the rest of the world. Over the last decades, an important number of Latin American scientists have developed fruitful research agendas on questions on learning and emotion, focusing on basic and/or translational research with humans and other animal models and implementing diverse methodologies. Notwithstanding the important contributions of these research programs, Latin American research on emotion and learning has followed the overall trend of other research fields throughout the region, namely, remaining partially hidden from the large scientific community of the world. This Research Topic aimed to engage researchers from Latin America to share their empirical and conceptual work on learning and emotion. Ultimately, this effort

was expected to strengthen and integrate our regional community of experts enhance global networking and establish new challenges and developments for future investigation *Well-Being of Youth and Emerging Adults across Cultures* Radosveta Dimitrova,2018-01-02 The current volume presents new empirical data on well being of youth and emerging adults from a global international perspective Its outstanding features are the focus on vast geographical regions e g Europe Asia Africa North and South America and on strengths and resources for optimal well being The international and multidisciplinary contributions address the complexities of young people s life in a variety of cultural settings to explore how key developmental processes such as identity religiosity and optimism social networks and social interaction in families and society at large promote optimal and successful adaptation The volume draws on core theoretical models of human development to highlight the applicability of these frameworks to culturally diverse youth and emerging adults as well as universalities and cultural specifics in optimal outcomes With its innovative and cutting edge approaches to cultural theoretical and methodological issues the book offers up to date evidence and insights for researchers practitioners and policy makers in the fields of cross cultural psychology developmental science human development sociology and social work
