**Capturing Social and Behavioral Domains and Measures in Electronic Health Records** Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Recommended Social and Behavioral Domains and Measures for Electronic Health Records, 2015-01-08 Determinants of health like physical activity levels and living conditions have traditionally been the concern of public health and have not been linked closely to clinical practice. However, if standardized social and behavioral data can be incorporated into patient electronic health records (EHRs), those data can provide crucial information about factors that influence health and the effectiveness of treatment. Such information is useful for diagnosis, treatment choices, policy, health care system design, and innovations to improve health outcomes and reduce health care costs. **Capturing Social and Behavioral Domains and Measures in Electronic Health Records Phase 2** identifies domains and measures that capture the social determinants of health to inform the development of recommendations for the meaningful use of EHRs. This report is the second part of a two-part study. The Phase 1 report identified 17 domains for inclusion in EHRs. This report pinpoints 12 measures related to 11 of the initial domains and considers the implications of incorporating them into all EHRs. This book includes three chapters from the Phase 1 report in addition to the new Phase 2 material. Standardized use of EHRs that include social and behavioral domains could provide better patient care, improve population health, and enable more informative research. The recommendations of **Capturing Social and Behavioral Domains and Measures in Electronic Health Records Phase 2** will provide valuable information on which to base problem identification, clinical diagnoses, patient treatment outcomes assessment, and population health measurement.

**Research on Emotion and Learning: Contributions from Latin America** Camilo Hurtado-Parrado, Carlos Gantiva, Leonardo A. Ortega, Alexander Gómez-A, Lucas Cuenya, Javier Leonardo Rico, 2020-05-11 Latin America has increased its share of world scientific publications by nearly twofold during the last two decades, approximately from 2 to 4%. Despite this positive trend, the scholarly impact of scientific research produced in the region, measured in terms of citation rate, remains low. Two interrelated factors that contribute to this situation are that most research groups tend to work in isolation or in local sporadic collaboration and results are often published in journals that are not indexed in major citation databases, e.g., SCOPUS or Web of Science. Ultimately, part of Latin American high-quality research seems to remain hidden from the rest of the world. Over the last decades, an important number of Latin American scientists have developed fruitful research agendas on questions on learning and emotion, focusing on basic and/or translational research with humans and other animal models and implementing diverse methodologies. Notwithstanding the important contributions of these research programs, Latin American research on emotion and learning has followed the overall trend of other research fields throughout the region, namely, remaining partially hidden from the large scientific community of the world. This Research Topic aimed to engage researchers from Latin America to share their empirical and conceptual work on

learning and emotion Ultimately this effort was expected to strengthen and integrate our regional community of experts enhance global networking and establish new challenges and developments for future investigation Federal Register,2013-10

**Feminism Against Progress** Mary Harrington,2023-03-02 An exhilarating read New Statesman In Feminism Against Progress Mary Harrington argues that the industrial era faith in progress is turning against all but a tiny elite of women Women s liberation was less the result of human moral progress than an effect of the material consequences of the Industrial Revolution We ve now left the industrial era for the age of AI biotech and all pervasive computing As a result technology is liberating us from natural limits and embodied sex differences Although this shift benefits a small class of successful professional women it also makes it easier to commodify women s bodies human intimacy and female reproductive abilities This is a stark warning against a dystopian future whereby poor women become little more than convenient sources of body parts to be harvested and wombs to be rented by the rich Progress has now stopped benefiting the majority of women and only a feminism that is sceptical of it can truly defend female interests in the 21st century *Lateralization and cognitive systems* Sebastian Ocklenburg,Christian Beste,Onur Gunturkun, Marco Hirnstein,2015-02-24 Left right asymmetries of structure and function are a common organization principle in the brains of humans and non human vertebrates alike While there are inherently asymmetric systems such as the human language system or the song system of songbirds the impact of structural or functional asymmetries on perception cognition and behavior is not necessarily limited to these systems For example performance in experimental paradigms that assess executive functions such as inhibition planning or action monitoring is influenced by information processing in the bottom up channel Depending on the type of stimuli used one hemisphere can be more efficient in processing than the other and these functional cerebral asymmetries have been shown to modulate the efficacy of executive functions via the bottom up channel We only begin to understand the complex neuronal mechanisms underlying this interaction between hemispheric asymmetries and cognitive systems Therefore it is the aim of this Research Topics to further elucidate how structural or functional hemispheric asymmetries modulate perception cognition and behavior in the broadest sense
