Cosimo Bambi, Stavros Katsanevas, Konstantinos D. Kokkotas, 2022-07-02 This handbook provides an updated comprehensive
description of gravitational wave astronomy In the first part it reviews gravitational wave experiments from ground and
space based laser interferometers to pulsar timing arrays and indirect detection from the cosmic microwave background In
the second part it discusses a number of astrophysical and cosmological gravitational wave sources including black holes
neutron stars possible more exotic objects and sources in the early Universe The third part of the book reviews the methods
to calculate gravitational waveforms The fourth and last part of the book covers techniques employed in gravitational wave
astronomy data analysis This book represents both a valuable resource for graduate students and an important reference for
researchers in gravitational wave astronomy *JET Simulations, Experiments, and Theory* Christophe Sauty, 2019-08-02 In
2008 the European FP6 JETSET project ended JETSET for Jet Simulations Experiments and Theory was a joint research
network of European expert teams on protostellar jets The present proceedings are a collection of contributions presenting
new results obtained by those groups since the end of the JETSET program This is also the occasion to celebrate Kanaris
Tsinganos important contributions to this network and for his enlightening insight in the subject that inspired us all Some of
the former JETSET students are now in the academic world and the subject has never been so alive So we present here a
collection of results of what has been done in the field of protostellar jets in the past ten years from the theoretical numerical
observational and experimental point of view We also present new challenges in the field of protostellar jets and what we
should expect from the development of new instruments and new numerical codes in the near future We also gather results
on the impact of the study of protostellar jets on other jet studies in particular on relativistic jets As a matter of fact it is time
for a new network *New Frontiers in GRMHD Simulations* Cosimo Bambi, Yosuke Mizuno, Swarnim Shashank, Feng
Yuan, 2025-03-10 This book offers an updated comprehensive review of the rapidly expanding field of GRMHD simulations In
Part I it reviews the basic equations for GRMHD simulations and for numerical relativity Part II describes public codes for
GRMHD simulations Part III is devoted to accretion processes onto compact objects in the non self gravitating fluid
approximation Part IV reviews the state of the art of GRMHD simulations with self gravitating fluids This book represents
both a valuable book for graduate students and important reference resource for researchers in the field **Register of**
