Audio Production Tips Peter Dowsett, 2015-10-16 Audio Production Tips Getting the Sound Right at the Source provides practical and accessible information detailing the production processes for recording today's bands. By demonstrating how to get the sound right at the source, author Peter Dowsett lays the appropriate framework to discuss the technical requirements of optimizing the sound of a source. Through its coverage of critical listening, pre-production arrangement, drum tuning, gain staging, and many other areas of music production, Audio Production Tips allows you to build the wide array of skills that apply to the creative process of music production. Broken into two parts, the book first presents foundational concepts followed by more specific production advice on a range of instruments. Key features: Important in-depth coverage of music theory, arrangement, and its applications; Real-life examples with key references to the author's music production background; Presents concepts alongside the production of a track captured specifically for the book; A detailed companion website including audio, video, Pro Tools session files of the track recording process, and videos including accompanying audio that can be examined in the reader's DAW. Please visit the accompanying companion website available at www.audioproductiontips.com for resources that further support the book's practical approach.

Head-Up Displays: Designing the Way Ahead Richard L. Newman, 2017-03-02 This is a thorough description of this increasingly important technology, starting from the development of head-up displays (HUDs), particularly specifications and standards, and operational problems associated with HUD use. HUD involvement in spatial disorientation and its use in recognizing and recovering from unusual attitudes is discussed. The book summarizes the design criteria, including hardware, software, interface, and display criteria. It goes on to outline flight tasks to be used for evaluating HUDs and discusses the impact of HUDs on flight training. Recent work indicates that a HUD may allow a significant reduction in the time required to train a pilot on a particular aircraft, even considering non-HUD related tasks. The author concludes with a review of unresolved HUD issues and recommendations for further research and provides an impressive bibliography, glossary, and index. Within the military aviation sector, the book will be of use to industry, research agencies, test pilot schools, and air force training establishments. In the civil area, regulatory authorities, airlines, and industry will also have an increasing interest.
