Journal of Integral Equations ,1985 **Linear Operators and Matrices** Israel Gohberg,Heinz Langer,2012-12-06 In September 1998 during the International Workshop on Analysis and Vibrating Systems held in Canmore Alberta Canada it was decided by a group of participants to honour Peter Lancaster on the occasion of his 70th birthday with a volume in the series Operator Theory Advances and Applications Friends and colleagues responded enthusiastically to this proposal and within a short time we put together the volume which is now presented to the reader Regarding acceptance of papers we followed the usual rules of the journal Integral Equations and Operator Theory The papers are dedicated to different problems in matrix and operator theory especially to the areas in which Peter contributed so richly At our request Peter agreed to write an autobiographical paper which appears at the beginning of the volume It continues with the list of Peter's publications We believe that this volume will pay tribute to Peter on his outstanding achievements in different areas of mathematics 1 Gohberg H Langer Peter Lancaster 1929 Operator Theory Advances and Applications Vol 130 1 7 2001 Birkhäuser Verlag Basel Switzerland My Life and Mathematics Peter Lancaster I was born in Appleby a small county town in the north of England on November 14th 1929 I had two older brothers and was to have one younger sister My family moved around the north of England as my father's work in an insurance company required The Journal of Integral Equations and Applications ,2012 *Integral Equations and Operator Theory* , Operator Theory, Operator Algebras and Their Interactions with Geometry and Topology Raul E Curto,William Helton,Huaxin Lin,Xiang Tang,Rongwei Yang,Guoliang Yu,2020-12-12 This book is the proceeding of the International Workshop on Operator Theory and Applications IWOTA held in July 2018 in Shanghai China It consists of original papers surveys and expository articles in the broad areas of operator theory operator algebras and noncommutative topology Its goal is to give graduate students and researchers a relatively comprehensive overview of the current status of research in the relevant fields The book is also a special volume dedicated to the memory of Ronald G Douglas who passed away on February 27 2018 at the age of 79 Many of the contributors are Douglas students and past collaborators Their articles attest and commemorate his life long contribution and influence to these fields Operator Theory, Operator Algebras, and Matrix Theory Carlos André,M. Amélia Bastos,Alexei Yu. Karlovich,Bernd Silberman,Ion Zaballa,2018-08-22 This book consists of invited survey articles and research papers in the scientific areas of the International Workshop on Operator Algebras Operator Theory and Applications which was held in Lisbon in July 2016 Reflecting recent developments in the field of algebras of operators operator theory and matrix theory it particularly focuses on groupoid algebras and Fredholm conditions algebras of approximation sequences C algebras of convolution type operators index theorems spectrum and numerical range of operators extreme supercharacters of infinite groups quantum dynamics and operator algebras and inverse eigenvalue problems Establishing bridges between the three related areas of operator algebras operator theory and matrix theory the book is aimed at researchers and graduate students

Monegato, G. vanden Berghe, 2001-06-20 homepage [sac cam na2000 index.html](#)7 Volume Set now available at special set price This volume contains contributions in the area of differential equations and integral equations Many numerical methods have arisen in response to the need to solve real life problems in applied mathematics in particular problems that do not have a closed form solution Contributions on both initial value problems and boundary value problems in ordinary differential equations appear in this volume Numerical methods for initial value problems in ordinary differential equations fall naturally into two classes those which use one starting value at each step one step methods and those which are based on several values of the solution multistep methods John Butcher has supplied an expert's perspective of the development of numerical methods for ordinary differential equations in the 20th century Rob Corless and Lawrence Shampine talk about established technology namely software for initial value problems using Runge Kutta and Rosenbrock methods with interpolants to fill in the solution between mesh points but the slant is new based on the question How should such software integrate into the current generation of Problem Solving Environments Natalia Borovykh and Marc Spijker study the problem of establishing upper bounds for the norm of the n th power of square matrices The dynamical system viewpoint has been of great benefit to ODE theory and numerical methods Related is the study of chaotic behaviour Willy Govaerts discusses the numerical methods for the computation and continuation of equilibria and bifurcation points of equilibria of dynamical systems Arieh Iserles and Antonella Zanna survey the construction of Runge Kutta methods which preserve algebraic invariant functions Valeria Antohe and Ian Gladwell present numerical experiments on solving a Hamiltonian system of H non and Heiles with a symplectic and a nonsymplectic method with a variety of precisions and initial conditions Stiff differential equations first became recognized as special during the 1950s In 1963 two seminal publications laid the foundations for later development Dahlquist's paper on A stable multistep methods and Butcher's first paper on implicit Runge Kutta methods Ernst Hairer and Gerhard Wanner deliver a survey which retraces the discovery of the order stars as well as the principal achievements obtained by that theory Guido Vanden Berghe Hans De Meyer Marnix Van Daele and Tanja Van Hecke construct exponentially fitted Runge Kutta methods with s stages Differential algebraic equations arise in control in modelling of mechanical systems and in many other fields Jeff Cash describes a fairly recent class of formulae for the numerical solution of initial value problems for stiff and differential algebraic systems Shengtai Li and Linda Petzold describe methods and software for sensitivity analysis of solutions of DAE initial value problems Again in the area of differential algebraic systems Neil Biehn John Betts Stephen Campbell and William Huffman present current work on mesh adaptation for DAE two point boundary value problems Contrasting approaches to the question of how good an approximation is as a solution of a given equation involve i attempting to estimate the actual error i.e the difference between the true and the approximate solutions and ii attempting to estimate the defect the amount by which the approximation fails to satisfy the

given equation and any side conditions The paper by Wayne Enright on defect control relates to carefully analyzed techniques that have been proposed both for ordinary differential equations and for delay differential equations in which an attempt is made to control an estimate of the size of the defect Many phenomena incorporate noise and the numerical solution of The Extended Field of Operator Theory Michael A. Dritschel, 2007-06-25 This volume contains contributions originating from the International Workshop on Operator Theory and Its Applications IWOTA held in Newcastle upon Tyne in July 2004 The articles expertly cover a broad range of material at the cutting edge of functional analysis and its applications The works are written by world authorities in their specialities **Recent Advances in Operator Theory A.** Dijksma, Marinus A.
