- When the engine is not to be used for a while, drain the fuel from the fuel tank. Then start the engine and let it run until all the fuel in the carburetor is used up which will stop the engine.

#### [CAUTION]

- (1) When the engine does not start successfully, do not try to pull the starter so many times with the choke closed as this will cause flooding the fuel into cylinder and make starting more difficult. So, fully open the choke and start the engine.
- (2) When the engine is still warm with fuel in it, push the tickler lever until the fuel run out of the over flow pipe. In this case, it is not necessary to work the prime pump.
- (3) Whenever possible, try to top up the fuel tank before it runs dry. This will make it easy to restart the engine.
- (4) After starting, operate the throttle lever to vary the engine speed up and down a few times. This is to draw out the remaining air in the carburetor. If air remains in the carburetor, it may cause the engine speed to drop or the engine to stop.
