

FOUNDATION CONSTRUCTION REQUIREMENTS: (Based on 2015 IRC)

- Foundations: construction must be capable of accommodating all loads and of transferring the resulting loads to the supporting soil.
- Fill soils that support loadings and foundations must be designed, installed and tested.

DECLARATION: I hereby declare that the above is a true and correct copy of the original document.

- Surface of drainage must be directed to a storm sewer, culvert or other approved point of collection that does not create a hazard.
- Lots must be graded so drain surface water away from foundation walls.
- Gravel must fill a min. of 12" within the first 30 ft

HOW TESTS *(Based on 2012 tests)*

- Where quantifiable data include expensive soils, compressible soils, drifting soils or other questionable soil characteristics, the building official must determine whether to require a soil test.
- In lieu of a complete geotechnical evaluation, assume the values in Table R601.4.1.

EDUCATION THREE

Abstract The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 sedentary, middle-aged women who were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of supervised walking, 3 times per week, for 30 minutes per session. The control group consisted of 20 women who did not participate in the walking program. The physical and psychological health of the women was assessed at baseline and at 12 weeks. The results of the study showed that the walking program had a positive effect on the physical and psychological health of the women. The women in the walking program showed significant improvements in physical fitness, including increased endurance, strength, and flexibility. They also showed significant improvements in psychological health, including reduced stress, anxiety, and depression. The women in the control group showed no significant changes in physical or psychological health. The results of this study suggest that a 12-week, low-intensity, supervised walking program can be an effective intervention for improving the physical and psychological health of sedentary, middle-aged women.

- All 3 Neurectomies: types only on peripheral Neurectomies.
- Grade is the firmest ground level adjoining the building at all exterior walls.

Alaska and Oregon (Petroleum Reserve)

- Used mostly in warm-climates, where firing is close to the ground and the frost line is close to the surface.
- In this system the footing is shallow and the ground floor is a concrete slab.

- Many slab-on-grade systems allow the concrete footing, foundation and subfloor to be poured at the same time.

Discussion

- **Crawl Space:** an under-floor space that is not a basement
- Found in all climates but predominates in temperate regions
- In this system, the insulated wooden ground floor is supported above grade on a foundation wall made of concrete or concrete block.

DECLARATION OF INTEREST The authors have nothing to disclose.

- On-grade sites, the top of any exterior foundation must extend above the finished grade of the street gutter at point of discharge or the roof if an approved drainage device is min. of 12" (305 mm).
- Alternate measures are permitted subject to the approval of the building official, provided that it can be demonstrated that required drainage to the point of discharge is directed away from the structure or is collected at all locations on the site.
