Macroeconomics Michael C. Burda, Charles Wyplosz, 1997 **Macroeconomic Theory** Jean-Pascal Benassy, 2011-05-12 This graduate textbook is a primer in macroeconomics It starts with essential undergraduate macroeconomics and develops in a simple and rigorous manner the central topics of modern macroeconomic theory including rational expectations growth business cycles money unemployment government policy and the macroeconomics of nonclearing markets The emphasis throughout the book is on both foundations and presenting the simplest model for each topic that will deliver the relevant answers The first two chapters recall the main workhorses of undergraduate macroeconomics the Solow Swan growth model the Keynesian IS LM model and the Phillips curve The next chapters present four fundamental building blocks of modern macroeconomics rational expectations intertemporal dynamic models nonclearing markets and imperfect competition and uncertainty Later the book deals with growth notably the Ramsey model overlapping generations and endogenous growth Chapter 10 moves to the famous real business cycles RBC which integrate in a unified framework growth and fluctuations The final chapters look at the issue of stabilization how best to guard the economy from shocks and the connections between politics and the macroeconomy To make the book self contained a mathematical appendix gives a number of simple technical results that are sufficient to follow the formal developments of the book

Market Solutions to the Problem of Stabilising Commodity Earnings Andrew Hughes Hallett, Prathap Ramanujam, 1990 **IS-LM and Modern Macroeconomics** Warren Young, Ben-Zion Zilberfarb, 2000 IS LM is perhaps the prime example of cognitive dissonance in economics and is problematic to many economists However the model's plasticity has enabled it to undergo a metamorphosis into augmented form enabling its continuing utilization as the papers in this volume discuss **The Macroeconomics of Developing Countries** Giovanni Andrea Cornia, 2020 The book focuses on the

short and long term macroeconomic challenges faced by developing countries characterized by missing incomplete and dualistic markets and weak institutions Such problems affect long term growth short term macroeconomic equilibrium employment and inequality far more than in the advanced economies A central message of the book is that ignoring these features and applying to developing countries models inspired by the reality of advanced economies may lead to wrong conclusions and policies These challenges are discussed for a number of archetypes of developing economies dependent on land and natural resources affected by supply rigidities in agriculture and featuring dualistic markets a dominant informal sector fast population growth and chronic dependence on the export of commodities and a volatile external finance Finally the book discusses the impact on growth inequality and poverty of the stabilization and structural adjustment reforms that were increasingly implemented during the last 30 years These issues have acquired center stage after the launch of the Millennium Development Goals and Sustainable Development Goals initiatives that have not spelled out a clear macroeconomic approach There is a risk therefore that wrong policies and sudden shocks may derail the progress towards the SDGs achieved by means of social policies
