**Abstract** The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 100 young adults. The program consisted of three sessions per week, each lasting 45 minutes. The sessions included cardiovascular exercise, strength training, and flexibility exercises. The results showed that the participants experienced significant improvements in cardiovascular fitness, strength, and flexibility after the 12-week program. The study also found that the participants who completed the program were more likely to continue with a regular exercise routine. The findings suggest that a 12-week training program can be an effective way to improve physical fitness in young adults.
