Van der Wal,2010-06-16 Decoding the Periodic Table In the year 1809 Russian Chemist Dimitri Ivanovich Mendeleev published the first Chemical Periodic Table of the Elements Since then scientists developed a theory that every element consists of a tightly packed mass of protons and neutrons which is surrounded by concentric spheres which are occupied by orbiting electrons This concept is known as the Standard Model but it is flawed because it cannot accommodate gravity For many decades researchers including this author in the late 1960 s tried to formulate theories that in a comprehensive way would unite all physical designs and phenomena under a common denominator but to no avail The String Theory is one of them but it has found no success In 1989 the author of the book made a fresh start again with the notion that particles such as the proton neutron and electron would not be round but that they would have straight lined square or cubic configurations because the Periodic Table s had quadratic numbers in their quantities of elements such as Period 1 with 2 elements 2 2x12 Periods 2 3 8 2 x 22 Periods 4 5 18 2 x 32 and Period 6 7 32 2 x 42 This might indicate square structural relationships lets give it a try It worked it took 20 years to do it it was a fascinating journey falling down and getting up again and again working without a computer with all figures hand drawn and discovering that the forces that make the nuclear mass of the

neutron do that by multiplying two force filled cubic volumes as in $3F \times 6 \times 3F \times 3F \times 3 \times 3F \times 3F \times 3F$ 1838 2656 **The periodic table** Brian J.
