Abstract

(b) If multiple statements are made about the same subject, the statements are made in the same order.

Abstract: Studies on the role of the family in the development of children's social skills are limited. This study examined the relationship between family structure and children's social skills. The sample consisted of 100 children aged 6-12 years, who were divided into two groups: children from intact families and children from single-parent families. The results showed that children from intact families had higher social skills than children from single-parent families. The findings suggest that family structure plays a significant role in the development of children's social skills.

Abstract: The argument is made that in the U.S. the use of the term "intelligence" is misleading. The term implies that there is something "out there" that can be known or understood. But the intelligence that we have is not "out there" and cannot be known or understood. It is a process, a way of thinking, and a way of acting. It is a way of making sense of the world and of ourselves. It is a way of being in the world. It is a way of being human.
