Environmental Information in Instructions for Use of Consumer Products Ari Nissinen,2005-03-11 The European

Union has highlighted the issue of environmentally sound use of products in the context of Integrated Product Policy IPP Accordingly consumers should have easy access to understandable relevant and credible environmental information Information about product characteristics is available in different forms and sources but in many cases relevant environmental information is not available on the product itself The study described in this report was initiated in order to produce information on the state of user instructions regarding environmental information User manuals of passenger cars and refrigerators were focused on examining the advice which could diminish the harmful environmental effects of the use of these products Other studied products included such durable products as textiles and furniture as well as such consumables as cleaning chemicals and recyclable paper products The study raised many ideas about actions that could promote the status and eco development of instructions for use Computer Recognition Systems Marek Kurzynski,Edward Puchala,Michal Wozniak,Andrzej Zolnierrek,2007-12-13 th This book contains papers accepted for presentation at the 4 International Conference on Computer Recognition Systems CORES 05 May 22 25 2005 Rydzyna Castle Poland This conference is a continuation of a series of conferences on similar topics KOSYR organized each second year since 1999 by the Chair of Systems and Computer Networks Wroclaw University of Technology An increasing interest to those conferences paid not only by home but also by foreign participants inspired the organizers to transform them into conferences of

international range Our expectations that the community of specialists in computer recognizing systems will find CORES 05 a proper form of maintaining the tradition of the former conferences have been confirmed by a large number of submitted papers Alas organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems It contains various theoretical approaches to the recognition problem based on mathematical statistics fuzzy sets morphological methods wavelets syntactic methods genetic algorithms artificial neural networks ontological models etc Most attention is still paid to visual objects recognition however acoustic textual and other objects are also considered Among application areas medical problems are in majority recognition of faces speech signals and textual information processing methods being also investigated
