

HOW STORYTELLING AFFECTS THE BRAIN

NEURAL COUPLING

A story synchronizes the listener's brain with the teller's brain.

MIRRORING

Mirror neurons enable listeners to mirror experience

CORTICAL ACTIVITY

Two areas of the brain are activated when processing facts. Stories activate many additional areas such as the motor cortex, sensory cortex and frontal cortex.

DOPAMINE

The brain releases dopamine in response to an emotionally-charged event, resolution of conflict, or even recognition of a pattern, creating a pleasurable response and ease of memory and recall

CORTISOL

The brain releases cortisol when it experiences conflict which increases attention and memory

OXYTOCIN

The brain releases oxytocin in response to characters that increases empathy and connection as well as compassion and trust

Mind Brain And Narrative:

Mind, Brain and Narrative Anthony J. Sanford, Catherine Emmott, 2012-12-20 Narratives enable readers to vividly experience fictional and non fictional contexts Writers use a variety of language features to control these experiences they direct readers in how to construct contexts how to draw inferences and how to identify the key parts of a story Writers can skilfully convey physical sensations prompt emotional states effect moral responses and even alter the readers attitudes *Mind Brain and Narrative* examines the psychological and neuroscientific evidence for the mechanisms which underlie narrative comprehension The authors explore the scientific developments which demonstrate the importance of attention counterfactuals depth of processing perspective and embodiment in these processes In so doing this timely interdisciplinary work provides an integrated account of the research which links psychological mechanisms of language comprehension to humanities work on narrative and style

Mind, Brain and Narrative Anthony J. Sanford, 2012 An examination of the scientific evidence for the mechanisms which underlie the effect a writer s language has on the reader

Stories and the Brain Paul B. Armstrong, 2020-05-26 This book explains how the brain interacts with the social world and why stories matter How do our brains enable us to tell and follow stories And how do stories affect our minds In *Stories and the Brain* Paul B Armstrong analyzes the cognitive processes involved in constructing and exchanging stories exploring their role in the neurobiology of mental functioning Armstrong argues that the ways in which stories order events in time imitate actions and relate our experiences to others lives are correlated to cortical processes of temporal binding the circuit between action and perception and the mirroring operations underlying embodied intersubjectivity He reveals how recent neuroscientific findings about how the brain works how it assembles neuronal syntheses without a central controller illuminate cognitive processes involving time action and self other relations that are central to narrative An extension of his previous book *How Literature Plays with the Brain* this new study applies Armstrong s analysis of the cognitive value of aesthetic harmony and dissonance to narrative Armstrong explains how narratives help the brain negotiate the neverending conflict between its need for pattern synthesis and constancy and its need for flexibility adaptability and openness to change The neuroscience of these interactions is part of the reason stories give shape to our lives even as our lives give rise to stories Taking up the age old question of what our ability to tell stories reveals about language and the mind this truly interdisciplinary project should be of interest to humanists and cognitive scientists alike

Brain, Mind, and the Narrative Imagination Christopher Comer, Ashley Taggart, 2021-01-28 Stories can inspire love anger fear and nostalgia but what is going on in our brains when this happens And how do our minds conjure up worlds and characters from the words we read on the page Rapid advances in the scientific understanding of the brain have cast new light on how we engage with literature This book collaboratively written by an experienced neuroscientist and literary critic and writer explores these new insights Key concepts in neuroscience are first introduced for non specialists and a range of literary texts by writers such as Ian McEwan Jim Crace

and E L Doctorow are read in light of the latest scientific thought on the workings of the mind and brain Brain Mind and the Narrative Imagination demonstrates how literature taps into deep structures of memory and emotion that lie at the heart of our humanity It will be of interest to readers of all sorts and students from both the humanities and the sciences **A New Theory of Mind** James A. Wise, 2016-05-11 This book presents a unique and intuitively compelling way of understanding how humans think It argues that narratives are the natural mode of thinking that the urge to think narratively reflects known neurological processes and that although narrative thinking is a product of evolution it enables us to transcend our evolutionary limits and actively shape our own futures In remarkably engaging language the authors describe how the currency of neural activity in the brain is transformed into the qualitatively different currency of conscious experience the everyday purposeful story like experience with which we all are familiar The book then examines the nature of thought and how it leads to purposeful action discussing among other concerns how memories about the past perceptions about the present and expectations about the future are structured as plausible coherent narratives by causation purpose and time and how errors are introduced into one's narratives both naturally and by other people often intentionally and how those errors bias one's expectations about the future and the actions taken or not taken as a consequence Each of these discussions is followed by a commentary that ties them to interesting facts and questions from throughout the physical and social sciences The book is concluded with the argument that narrative thought is what is meant when one uses the word mind

Remapping Your Mind Lewis Mehl-Madrona, 2015-07-17 A guide to retelling your personal family and cultural stories to transform your life your relationships and the world Applies the latest neuroscience research on memory brain mapping and brain plasticity to the field of narrative therapy Details mind mapping and narrative therapy techniques that use story to change behavior patterns in ourselves our relationships and our communities Explores how narrative therapy can help replace dysfunctional cultural stories with ones that build healthier relationships with each other and the planet We are born into a world of stories that quickly shapes our behavior and development without our conscious awareness By retelling our personal family and cultural narratives we can transform the patterns of our own lives as well as the patterns that shape our communities and the larger social worlds in which we interact Applying the latest neuroscience research on memory brain mapping and brain plasticity to the field of narrative therapy Lewis Mehl Madrona and Barbara Mainguy explain how the brain is specialized in the art of story making and story telling They detail mind mapping and narrative therapy techniques that use story to change behavior patterns in ourselves our relationships and our communities They explore studies that reveal how memory works through story how the brain recalls things in narrative rather than lists and how our stories modify our physiology and facilitate health or disease Drawing on their decades of experience in narrative therapy the authors examine the art of helping people to change their story providing brain mapping practices to discover your inner storyteller and test if the stories you are living are functional or dysfunctional healing or destructive They explain how to create new

characters and new stories ones that excite you help you connect with yourself and deepen your intimate connections with others Detailing how shared stories and language form culture the authors also explore how narrative therapy can help replace dysfunctional cultural stories with those that offer templates for healthier relationships with each other and the planet

Arthurian Literature XXXVII Megan G. Leitch, Kevin S. Whetter, 2022 New and fresh assessments of Malory's *Le Morte Darthur* The essays here are devoted to that seminal Arthurian work Sir Thomas Malory's *Le Morte Darthur* Developments of papers first given at the Malory at 550 Old and New conference they emphasise here the second part of its remit Accordingly several contributors focus new attention on Malory's style using his stock phrases metaphors characterization or manipulation of sources to argue for a deeper appreciation of his merits as an author If as others illustrate Malory is a much better artist than his twentieth century reputation allowed then there is a renewed need to reassess the vexed question of the possible originality of his *Tale of Sir Gareth of Orkeney* Similarly fresh approaches underlie those essays re-examining Malory's attitude to time and the sacred in *The Sankgreal* the manner in which the ghosts of Lot and his sons highlight potential failures in the Round Table Oath or the pleasures and pitfalls of Arthurian hospitality The remaining contributions argue for new approaches to Malory's narrative gaps Launcelot's status as a victim of sexual violence and the importance of rejecting Victorian moral attitudes towards Gwenyvere and Isode moralizing that still informs much recent scholarship addressing Malory's female characters Contributors Joyce Coleman Elizabeth Edwards Kristina Hildebrand Cathy Hume David F Johnson Megan Leitch Andrew Lynch Molly A Martin Cory James Rushton Fiona Tolhurst Michael W Twomey

The Visual Narrative Reader Neil Cohn, 2016-01-28 Sequential images are as natural at conveying narratives as verbal language and have appeared throughout human history from cave paintings and tapestries right through to modern comics Contemporary research on this visual language of sequential images has been scattered across several fields linguistics psychology anthropology art education comics studies and others Only recently has this disparate research begun to be incorporated into a coherent understanding In *The Visual Narrative Reader* Neil Cohn collects chapters that cross these disciplinary divides from many of the foremost international researchers who explore fundamental questions about visual narratives How does the style of images impact their understanding How are metaphors and complex meanings conveyed by images How is meaning understood across sequential images How do children produce and comprehend sequential images Are visual narratives beneficial for education and literacy Do visual narrative systems differ across cultures and historical time periods This book provides a foundation of research for readers to engage in these fundamental questions and explore the most vital thinking about visual narrative It collects important papers and introduces review chapters summarizing the literature on specific approaches to understanding visual narratives The result is a comprehensive reader that can be used as a coursebook a researcher resource and a broad overview of fascinating topics suitable for anyone interested in the growing field of the visual language of comics and visual narratives

Changing Minds in Therapy Margaret Wilkinson,2010-03-30 The latest application of contemporary neuroscience to therapeutic work There is an increasing clinical focus on how recent advances in neuroscience attachment and trauma can be applied to treating patients with a history of early neglect Margaret Wilkinson draws on her extensive clinical expertise as a master therapist to explain the role of the mind brain relationship in therapeutic change Psyche's Veil Terry Marks-Tarlow,2013-12-16 Historically the language and concepts within clinical theory have been steeped in linear assumptions and reductionist thinking Because the essence of psychotherapy involves change Psyche s Veil suggests that clinical practice is inherently a nonlinear affair In this book Terry Marks Tarlow provides therapists with new language models and metaphors to narrow the divide between theory and practice while bridging the gap between psychology and the sciences By applying contemporary perspectives of chaos theory complexity theory and fractal geometry to clinical practice the author discards traditional conceptions of health based on ideals of regularity set points and normative statistics in favour of models that emphasize unique moments variability and irregularity Psyche s Veil further explores philosophical and spiritual implications of contemporary science for psychotherapy Written at the interface between artistic scientific and spiritual aspects of therapy Psyche s Veil is a case based book that aspires to a paradigm shift in how practitioners conceptualize critical ingredients for internal healing Novel treatment of sophisticated psychoanalytical issues and tie ins to interpersonal neurobiology make this book appeal to both the specialist practitioner as well as the generalist reader

Development of executive function during childhood Yusuke Moriguchi,Philip D Zelazo,Nicolas Chevalier,2016-04-01 Executive function refers to the goal oriented regulation of one s own thoughts actions and emotions Its importance is attested by its contribution to the development of other cognitive skills e g theory of mind social abilities e g peer interactions and academic achievement e g mathematics and by the consequences of deficits in executive function which are observed in wide range of developmental disorders such as attention deficit hyperactivity disorder and autism Over the last decade there have been growing interest in the development of executive function and an expanding body of research has shown that executive function develops rapidly during the preschool years with adult level performance being achieved during adolescence or later This recent work together with experimental research showing the effects of interventions targeting executive function has yielded important insights into the neurocognitive processes underlying executive function Given the complexity of the construct of executive function however and the multiplicity of underlying processes there are often inconsistencies in the way that executive function is defined and studied This inconsistency has

hampered communication among researchers from various fields This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function Researchers using various methods including behavioral experiments neuroimaging eye tracking computer simulation observational methods and questionnaires are encouraged to contribute original empirical research In addition to original empirical articles theoretical reviews and opinions perspective articles on promising future directions are welcome We hope that researchers from different areas such as developmental psychology educational psychology experimental psychology neuropsychology neuroscience psychiatry computational science etc will be represented in the Research Topic

The Narrative Brain Fritz Alwin Breithaupt, 2025-02-25 An investigation of the emotional power of narrative that illuminates the relationship between the human brain and the stories we tell As humans we think in stories stories that allow us to feel and share emotions In order for this phenomenon to work our brains and the ways in which we tell stories must be attuned to each other But how exactly does this happen Tapping into the essence of thinking in stories Fritz Breithaupt draws on the latest scientific research including a retelling study comparable to the telephone game with more than 12 000 participants and experiments in which ChatGPT functions as storyteller This wide ranging study includes analyses of political history novels fairy tales and everyday office gossip proposes a new theory of narrative that focuses on emotions and affects and hypothesizes on the evolution of narratives among our hominid ancestors Redefining us as beings who anchor ourselves in the world through narratives Breithaupt introduces a new kind of psychology that cuts to the core of how and why humans feel the need to tell stories

The Annual of Psychoanalysis, V. 28 Jerome A. Winer, 2013-06-17 Volume 28 of *The Annual* features stimulating original essays on the relationship between psychoanalysis and the neurosciences Edelman s Neural Darwinism informs Barry s investigation of the psychoanalytic theory of internalization and Fajardo s reassessment of breaks in consciousness whereas Gedo s hierarchical model of mental functioning informs Fisher s presentation of the treatment of an autistic child Elsewhere Hadley proposes a neurobiologically distinct motivational system devoted to the development of autonomy Solms attempts to bridge psychoanalysis and the neurophysiology of dreaming Levin and Trevarthen examine the relationship of conscious and unconscious functions to the executive control network ECN of the brain Levin examines the contributions of chaos theory to psychoanalysis and Modell explores metaphor as the crucial aspect of the developing mind and brain through which cognition itself occurs Moraitis s examination of why analysis has been so slow to integrate its findings with the insights of contemporary neuroscience and cognitive psychology and Sadow s reprise on the role of theory in the evolution of psychoanalysis usefully frame the contributions to this section Section II of Volume 28 reengages a subject area for which *The Annual* has become well known The four characteristically excellent studies in applied psychoanalysis found here cover the effect of early father loss on the work of the American watercolorist Charles Burchfield *The Creativity of Women* the unconscious influence of metaphor on attitudes and value judgments and the

application of self psychology to the dramas of Eugene O'Neill. It is altogether typical of this fine series that a collection of essays dedicated to the development of a psychobiologically sophisticated psychoanalysis should be followed by contributions that testify to the explanatory vitality of psychoanalysis with respect to issues of literature, art, and creativity. **Remapping Your Mind** Lewis Mehl-Madrona, 2015-07-26. A guide to retelling your personal family and cultural stories to transform your life, your relationships, and the world. Applies the latest neuroscience research on memory, brain mapping, and brain plasticity to the field of narrative therapy. Details mind mapping and narrative therapy techniques that use story to change behavior patterns in ourselves, our relationships, and our communities. Explores how narrative therapy can help replace dysfunctional cultural stories with ones that build healthier relationships with each other and the planet. We are born into a world of stories that quickly shapes our behavior and development without our conscious awareness. By retelling our personal family and cultural narratives, we can transform the patterns of our own lives as well as the patterns that shape our communities and the larger social worlds in which we interact. Applying the latest neuroscience research on memory, brain mapping, and brain plasticity to the field of narrative therapy. Lewis Mehl-Madrona and Barbara Mainguy explain how the brain is specialized in the art of story making and story telling. They detail mind mapping and narrative therapy techniques that use story to change behavior patterns in ourselves, our relationships, and our communities. They explore studies that reveal how memory works through story, how the brain recalls things in narrative rather than lists, and how our stories modify our physiology and facilitate health or disease. Drawing on their decades of experience in narrative therapy, the authors examine the art of helping people to change their story, providing brain mapping practices to discover your inner storyteller, and test if the stories you are living are functional or dysfunctional, healing or destructive. They explain how to create new characters and new stories, ones that excite you, help you connect with yourself, and deepen your intimate connections with others. Detailing how shared stories and language form culture, the authors also explore how narrative therapy can help replace dysfunctional cultural stories with those that offer templates for healthier relationships with each other and the planet. **The American Journal of Psychology** Karl M. Dallenbach, Madison Bentley, Edwin Garrigues Boring, Margaret Floy Washburn, 2001.

Narrative and Understanding Persons Daniel D. Hutto, 2007-07-12. This volume brings together nine original contributions that develop and challenge proposals on narratives. **Storytelling and the Sciences of Mind** David Herman, 2013-07-12. An interdisciplinary exploration of narrative not just as a target for interpretation but also as a means for making sense of experience itself. With *Storytelling and the Sciences of Mind*, David Herman proposes a cross-fertilization between the study of narrative and research on intelligent behavior. This cross-fertilization goes beyond the simple importing of ideas from the sciences of mind into scholarship on narrative and instead aims for convergence between work in narrative studies and research in the cognitive sciences. The book as a whole centers on two questions: How do people make sense of stories? And how do people use stories to make sense of the world? Examining narratives from different periods and across

multiple media and genres Herman shows how traditions of narrative research can help shape ways of formulating and addressing questions about intelligent activity and vice versa Using case studies that range from Robert Louis Stevenson s Dr Jekyll and Mr Hyde to sequences from The Incredible Hulk comics to narratives told in everyday interaction Herman considers storytelling both as a target for interpretation and as a resource for making sense of experience itself In doing so he puts ideas from narrative scholarship into dialogue with such fields as psycholinguistics philosophy of mind and cognitive social and ecological psychology After exploring ways in which interpreters of stories can use textual cues to build narrative worlds or storyworlds Herman investigates how this process of narrative worldmaking in turn supports efforts to understand and engage with the conduct of persons among other aspects of lived experience
