Callister, Jr., David G. Rethwisch, 2012 This text treats the important properties of the three primary types of materials metals ceramics and polymers as well as composites and the relationships that exist between the structural elements of these materials and their properties Emphasis is placed on mechanical behavior and failure including techniques that are employed to improve the mechanical and failure characteristics in terms of alteration of structural elements Furthermore individual chapters discuss each of corrosion electrical thermal magnetic and optical properties New and cutting edge materials are also discussed Even if an instructor does not have a strong materials background i.e. is from mechanical civil chemical or electrical engineering or chemistry departments he or she can easily teach from this text The material is not at a level beyond which the students can comprehend an instructor would not have to supplement in order to bring the students up to the level of the text Also the author has attempted to write in a concise clear and organized manner using terminology that is familiar to the students Extensive student and instructor resource supplements are also provided Publisher's description

Slope Stability and Erosion Control: Ecotechnological Solutions Joanne E. Norris, Alexia Stokes, Slobodan B. Mickovski, Erik Cammeraat, Rens van Beek, Bruce C. Nicoll, Alexis Achim, 2008-02-29 This chapter describes the processes involved in the transport of material over hillslopes Hillslopes provide the gradients enabling material to be transported from the slopes themselves towards the valley bottoms directly by gravity alone or by water flowing down over the surface Gravity has the potential to transfer material downslope if the material resistance to contact is insufficient Similarly water and wind flowing along the surface exert a drag on soil particles and have the potential to entrain material After the gradient has fallen below a critical threshold to keep the material in transport deposition occurs Conventionally slope processes in which

gravity alone is the dominant transporting agent are called mass movements Brunsden 1984 Processes in which other agents dominate are called erosion e g wind or water erosion Flowing water is an important transporting agent on which the emphasis is placed here Although mass wasting is a natural process its incidence and impact may be exacerbated by human activities Crozier 1986 Morgan 2005 A situation may ultimately arise in which human interests become unsafe or unsustainable This impact is not only directly felt in the areas where material is removed or deposited and indirectly mass wasting may have an effect on soil and water quality in areas located further downstream In the following sections a brief overview is given of the mechanisms morphology causes and consequences of mass movements and erosion High Entropy Alloys T.S. Srivatsan, Manoj Gupta, 2020-07-20 This book provides a cohesive overview of innovations advances in processing and characterization and applications for high entropy alloys HEAs in performance critical and non performance critical sectors It covers manufacturing and processing advanced characterization and analysis techniques and evaluation of mechanical and physical properties With chapters authored by a team of internationally renowned experts the volume includes discussions on high entropy thermoelectric materials corrosion and thermal behavior of HEAs improving fracture resistance fatigue properties and high tensile strength of HEAs HEA films and more This work will be of interest to academics scientists engineers technologists and entrepreneurs working in the field of materials and metals development for advanced applications Features Addresses a broad spectrum of HEAs and related aspects including manufacturing processing characterization and properties Emphasizes the application of HEAs Aimed at researchers engineers and scientists working to develop materials for advanced applications T S Srivatsan PhD Professor of Materials Science and Engineering in the Department of Mechanical Engineering at the University of Akron Ohio USA earned his MS in Aerospace Engineering in 1981 and his PhD in Mechanical Engineering in 1984 from the Georgia Institute of Technology USA He has authored or edited 65 books delivered over 200 technical presentations and authored or co authored more than 700 archival publications in journals book chapters book reviews proceedings of conferences and technical reports His RG score is 45 with a h index of 53 and Google Scholar citations of 9000 ranking him to be among the top 2% of researchers in the world He is a Fellow of i the American Society for Materials International ii the American Society of Mechanical Engineers and iii the American Association for Advancement of Science Manoj Gupta PhD is Associate Professor of Materials at NUS Singapore He is a former Head of Materials Division of the Mechanical Engineering Department and Director Designate of Materials Science and Engineering Initiative at NUS Singapore In August 2017 he was highlighted among the Top 1% Scientists of the World by the Universal Scientific Education and Research Network and in the Top 2.5% among scientists as per ResearchGate In 2018 he was announced as World Academy Championship Winner in the area of Biomedical Sciences by the International Agency for Standards and Ratings A multiple award winner he actively collaborates visits as an invited researcher and visiting and chair professor in Japan France Saudi Arabia Qatar China the United States and India
