

RIGHT HAND CONTROL PANEL

GEAR SHIFT

The gear shift pattern is exposed on the outside face to the rear of the shift.

A light spring pressure must be overcome when shifting from second into first gear. To engage reverse, move the lock-out fully rearwards and when reverse gear is selected the lock-out will automatically return to the normal position.

For further information on recommended gear change speeds, see Section 6, Driving.

INTERIOR LIGHTS

This push/push type switch controls the operation of the 3 position lamps fitted to the rear panel. The switch is operable when the ignition is switched off and the lamp switches are in position 2. From the switch one can illuminate the lamps, press again to switch the lamps off. The 3 position rocker type lamp switch works as follows:

1. Angled upwards - shows if the interior light switch is switched on.
2. Central - switched in position the interior light switch.
3. Angled downwards - shows if the interior light switch is switched off.
