

Law of Sines ~,

$$\frac{d}{\sin x} = \frac{1}{\sin\left(\frac{\pi-x}{2}\right)}$$

$$\Rightarrow d = \frac{\sin x}{\sin\left(\frac{\pi-x}{2}\right)}$$

$$\begin{aligned} d &= \sqrt{\sin^2 x + (1 - \cos x)^2} \\ &= \sqrt{\sin^2 x + 1 + \cos^2 x - 2 \cos x} \\ &= \sqrt{2 - 2 \cos x} \end{aligned}$$

$$\frac{\sin x}{\sin\left(\frac{\pi-x}{2}\right)} = \sqrt{2 - 2 \cos x}$$

Looking At It Logically Pi Key Geometry:

The Mathematical Philosophy of Bertrand Russell: Origins and Development Francisco Rodríguez-Consuegra, 2012-12-06 by Ivor Grattan Guinness Until twenty years ago the outline history of logicism was well known Frege had had the important ideas until he was eclipsed by Wittgenstein Russell was important in publicising the former and tutoring the latter and also for working with Moore in the conversion of British philosophy from neo Hegelianism to the new analytic tradition in the 1900s but his own work on logic and especially logicism was very muddled Around that time Russell who was still alive sold his manuscripts to McMaster University in Canada and interest in his achievements in logic began to develop especially after his death in 1970 Scholars found thousands of folios of unpublished holograph awaiting their attention and also hundreds of pertinent letters both in the Russell Archives and elsewhere in certain recipients collections Various facets of his work came to light for the first time and others which could have been gleaned from carefully reading of the published sources gained new publicity from the evidence revealed in manuscripts Even the technical passage work which constitutes the unread majority of the Principia mathematica 1910 13 of Russell and Whitehead began to receive a little respectful scrutiny It turned out that Russell had done several pioneering things While indeed often incoherent in reference and content they comprised major forays into the new mathematical logic of which he turned out to be a major founder some are even of interest to modern studies

The Facts in Logical Space Jason Turner, 2016-02-04 Philosophers have long been tempted by the idea that objects and properties are abstractions from the facts But how is this abstraction supposed to go If the objects and properties aren't already there how do the facts give rise to them Jason Turner develops and defends a novel answer to this question The facts are arranged in a quasi geometric logical space and objects and properties arise from different quasi geometric structures in this space

Logical Foundations of Mathematics and Computational Complexity Pavel Pudlák, 2013-04-22 The two main themes of this book logic and complexity are both essential for understanding the main problems about the foundations of mathematics Logical Foundations of Mathematics and Computational Complexity covers a broad spectrum of results in logic and set theory that are relevant to the foundations as well as the results in computational complexity and the interdisciplinary area of proof complexity The author presents his ideas on how these areas are connected what are the most fundamental problems and how they should be approached In particular he argues that complexity is as important for foundations as are the more traditional concepts of computability and provability Emphasis is on explaining the essence of concepts and the ideas of proofs rather than presenting precise formal statements and full proofs Each section starts with concepts and results easily explained and gradually proceeds to more difficult ones The notes after each section present some formal definitions theorems and proofs Logical Foundations of Mathematics and Computational Complexity is aimed at graduate students of all fields of mathematics who are interested in logic complexity and foundations It will also be of interest for both physicists and philosophers who are curious to learn the basics of logic and complexity theory *The*
